Bike Handlebar Grip

Day 7 – Bike Grip (Image-Based Notes Only)

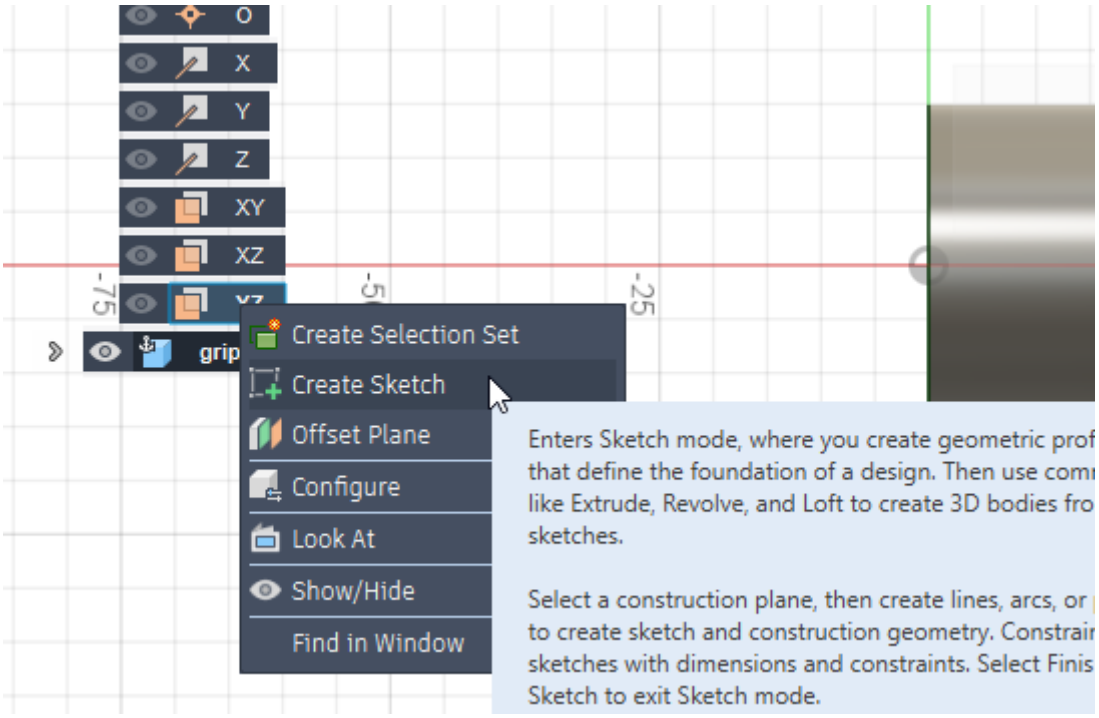

Source: GRIP DAY 7.pdf :contentReference[oaicite:1]{index=1}

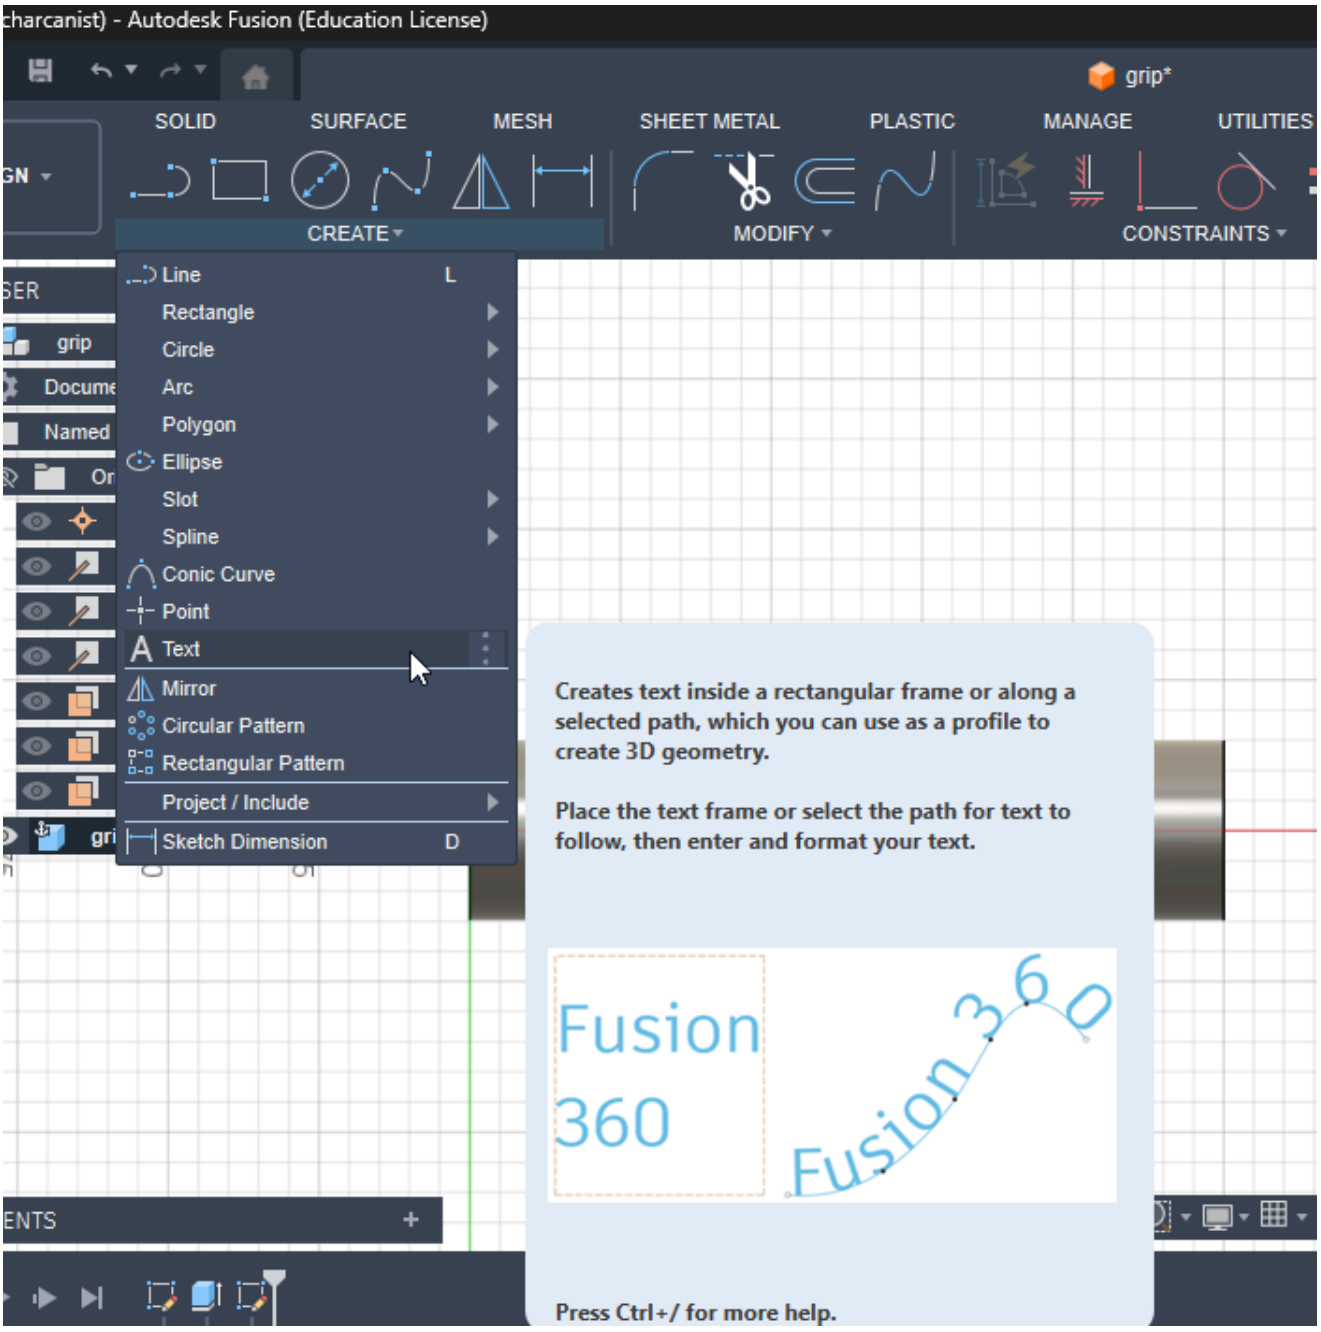

Z plane → draw a 30mm circle

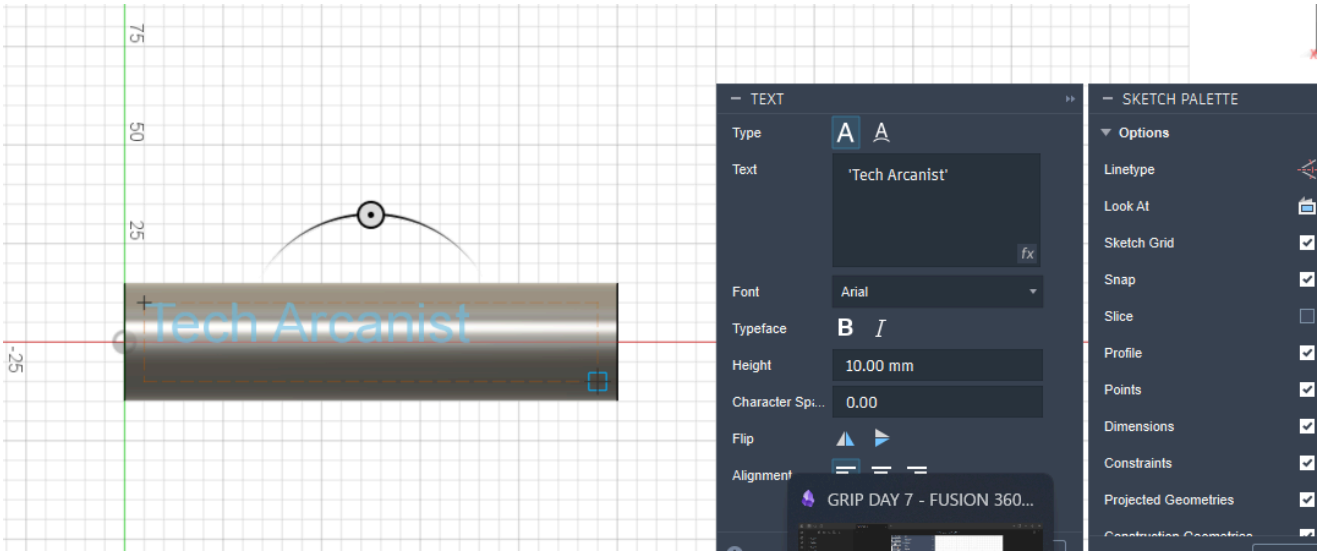

Extrude the circle 125 mm

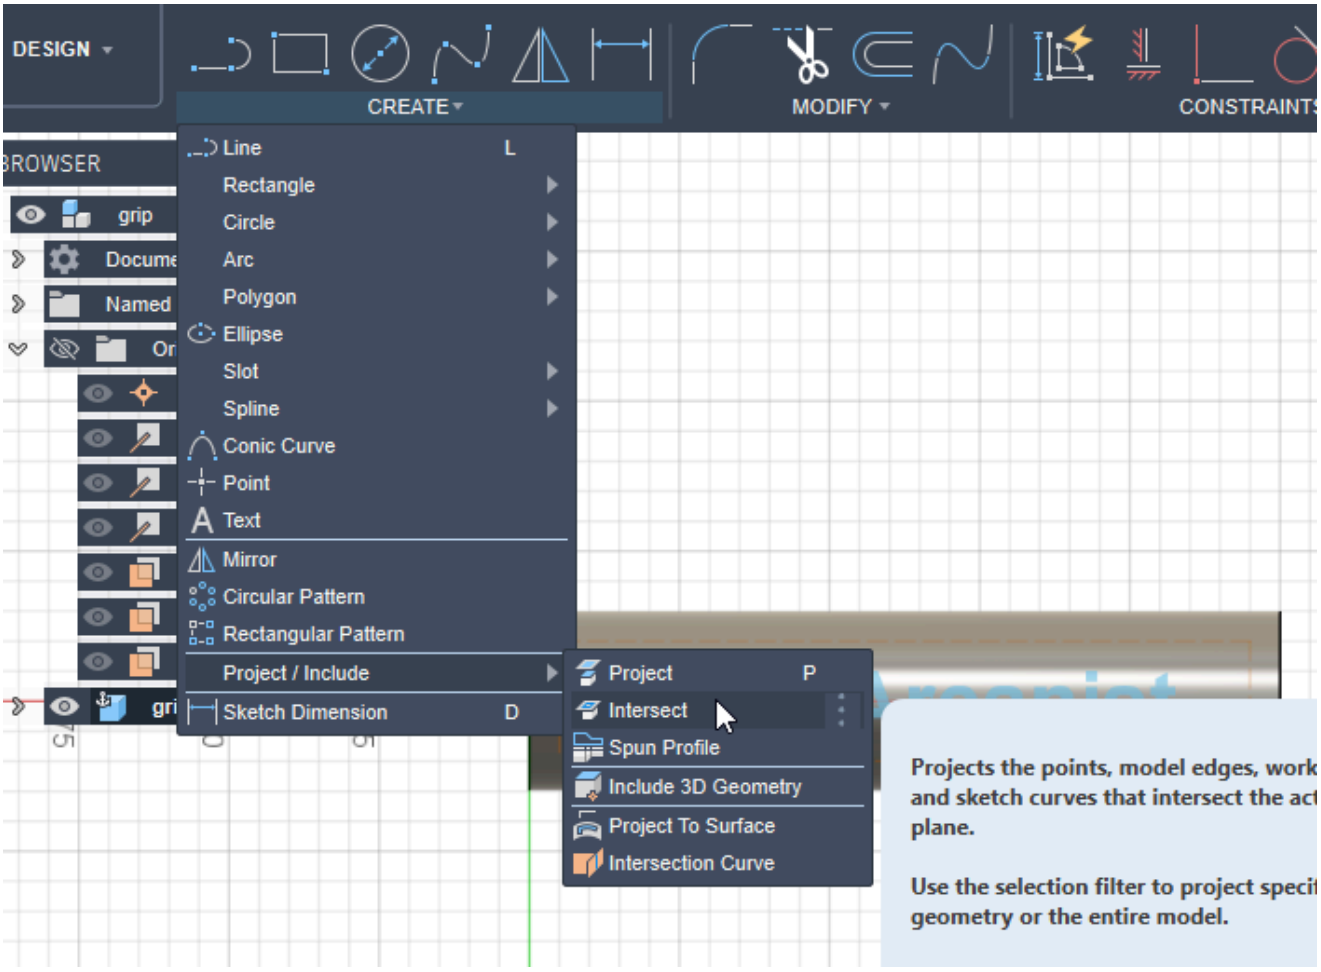

Create a sketch on the YZ plane

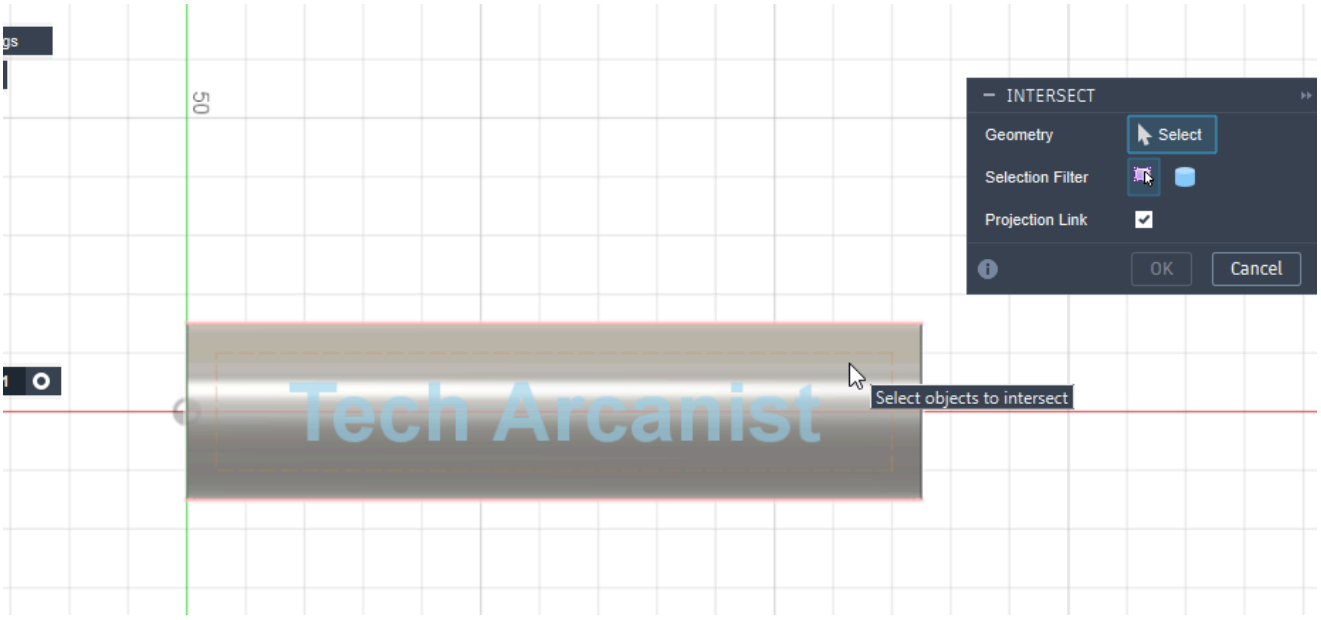

Choose the Text tool

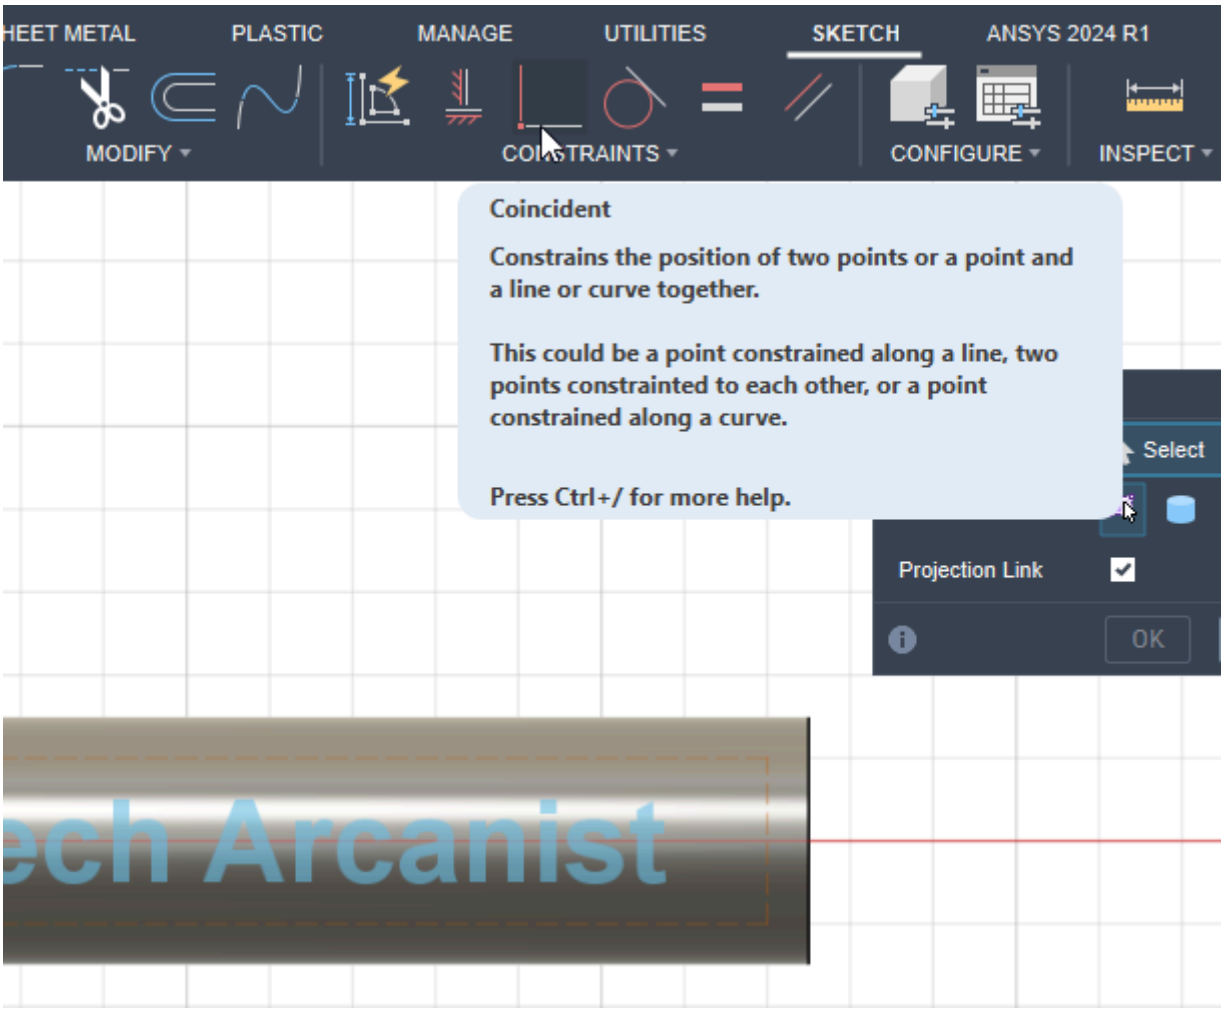

Enter your text

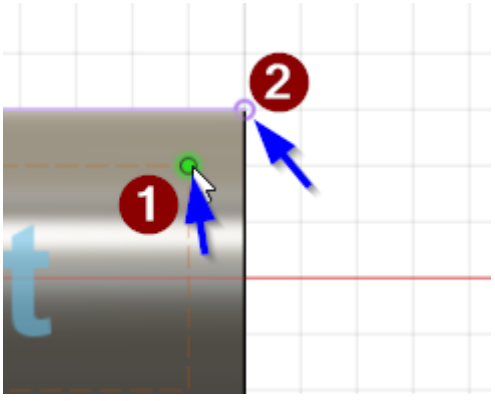

Use Intersect

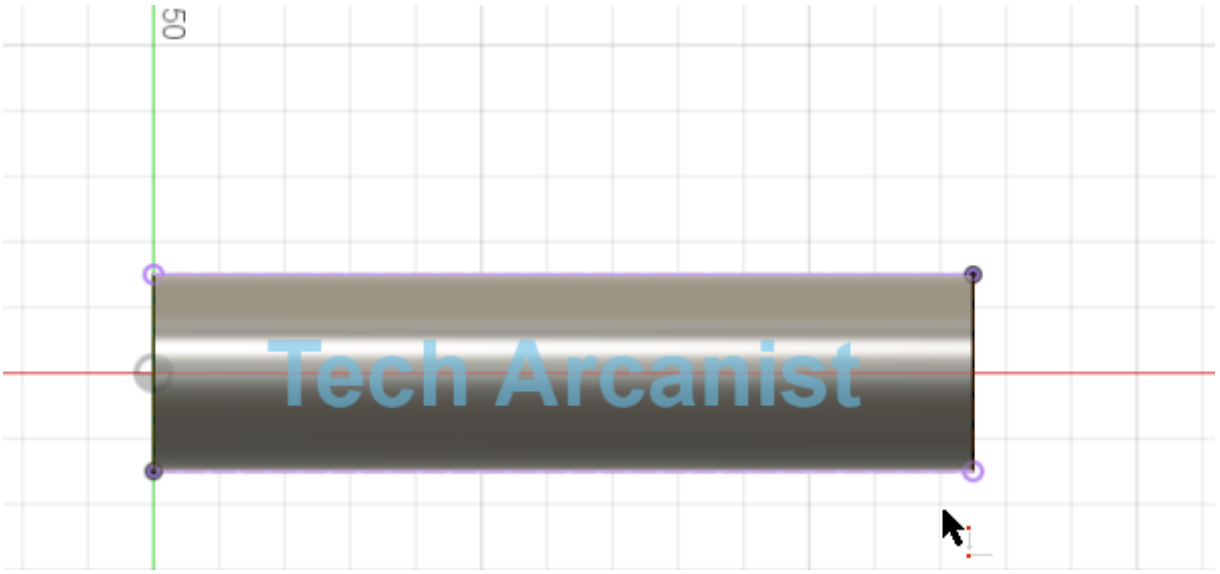

Click on the cylinder to project geometry

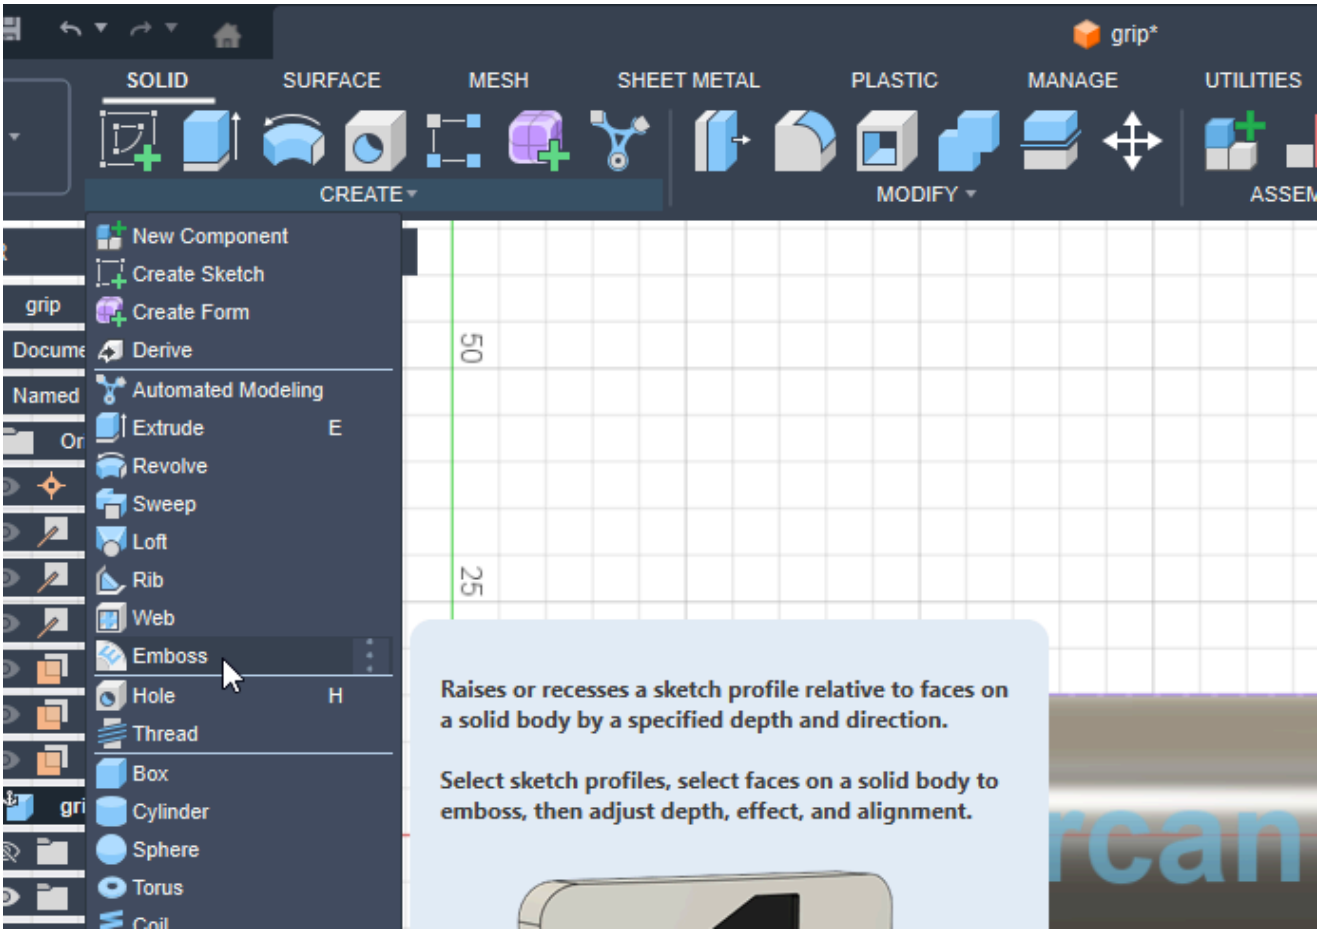

Select the Coincident constraint

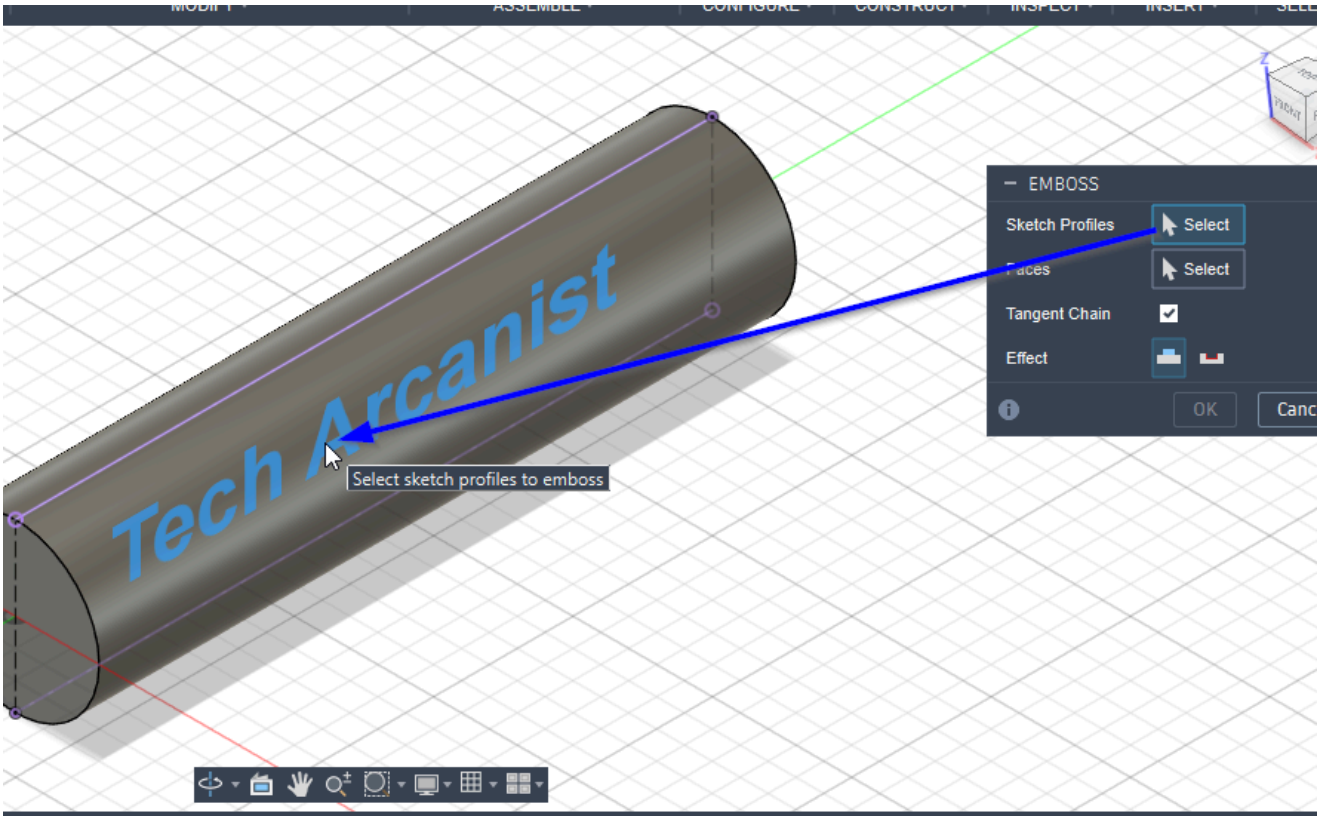

Apply coincident on both points

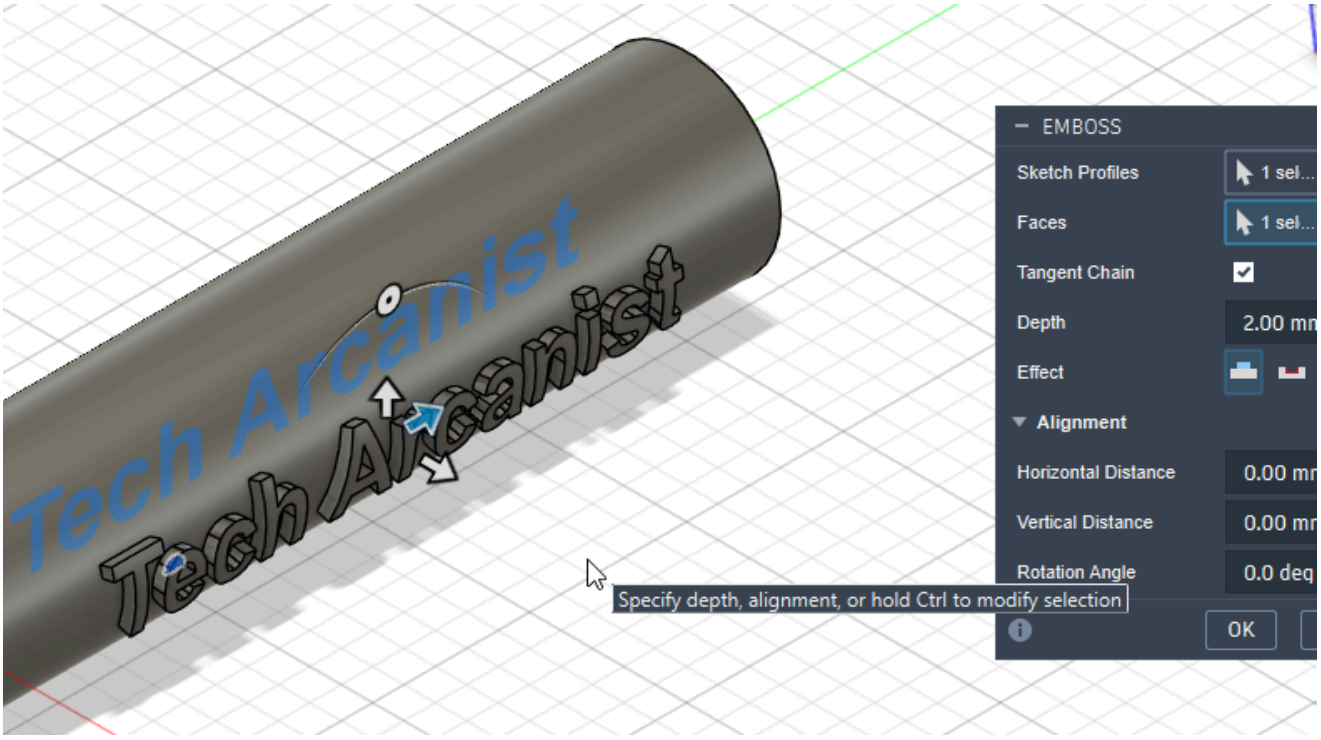

Do this for both corners

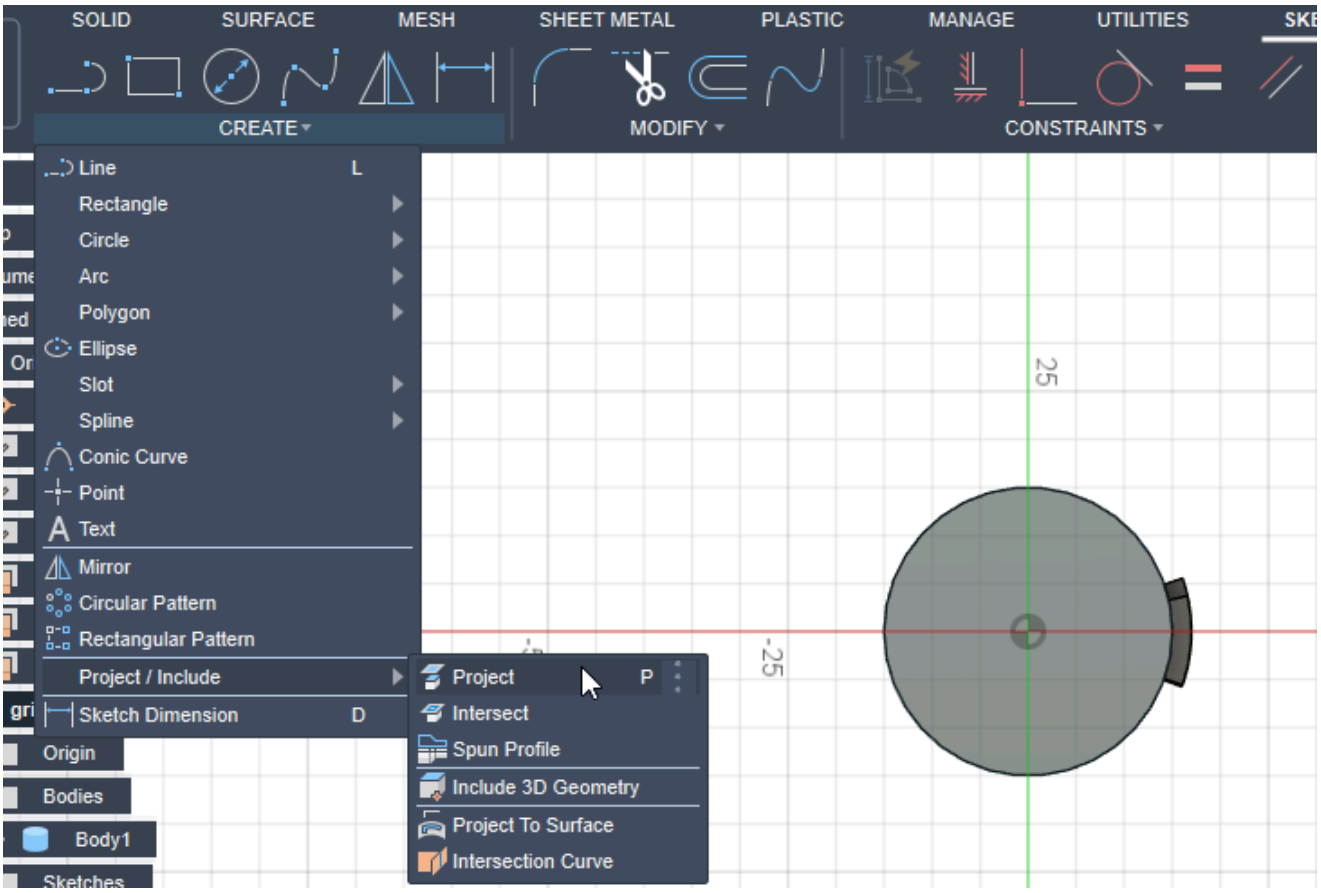

Now go to Emboss

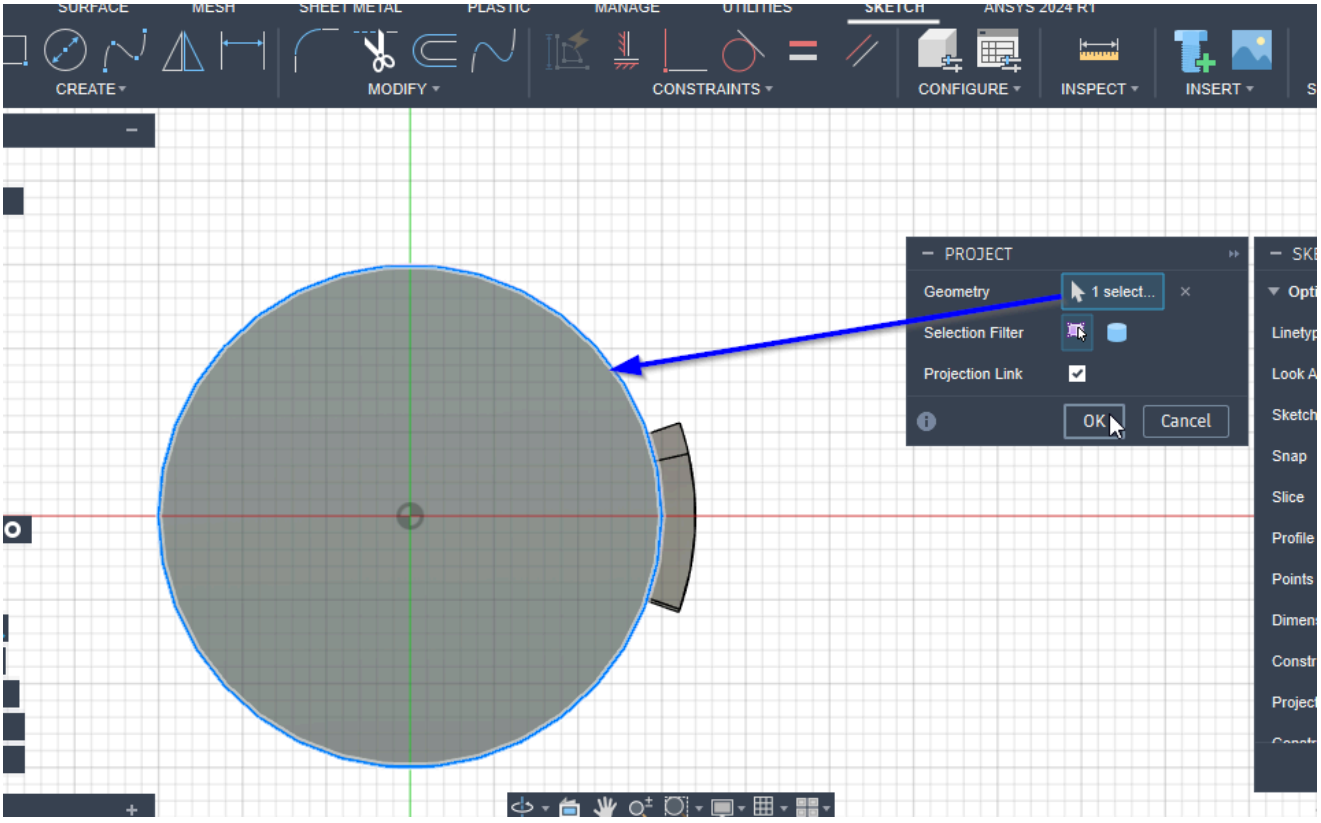

Click on the text, then the cylinder body

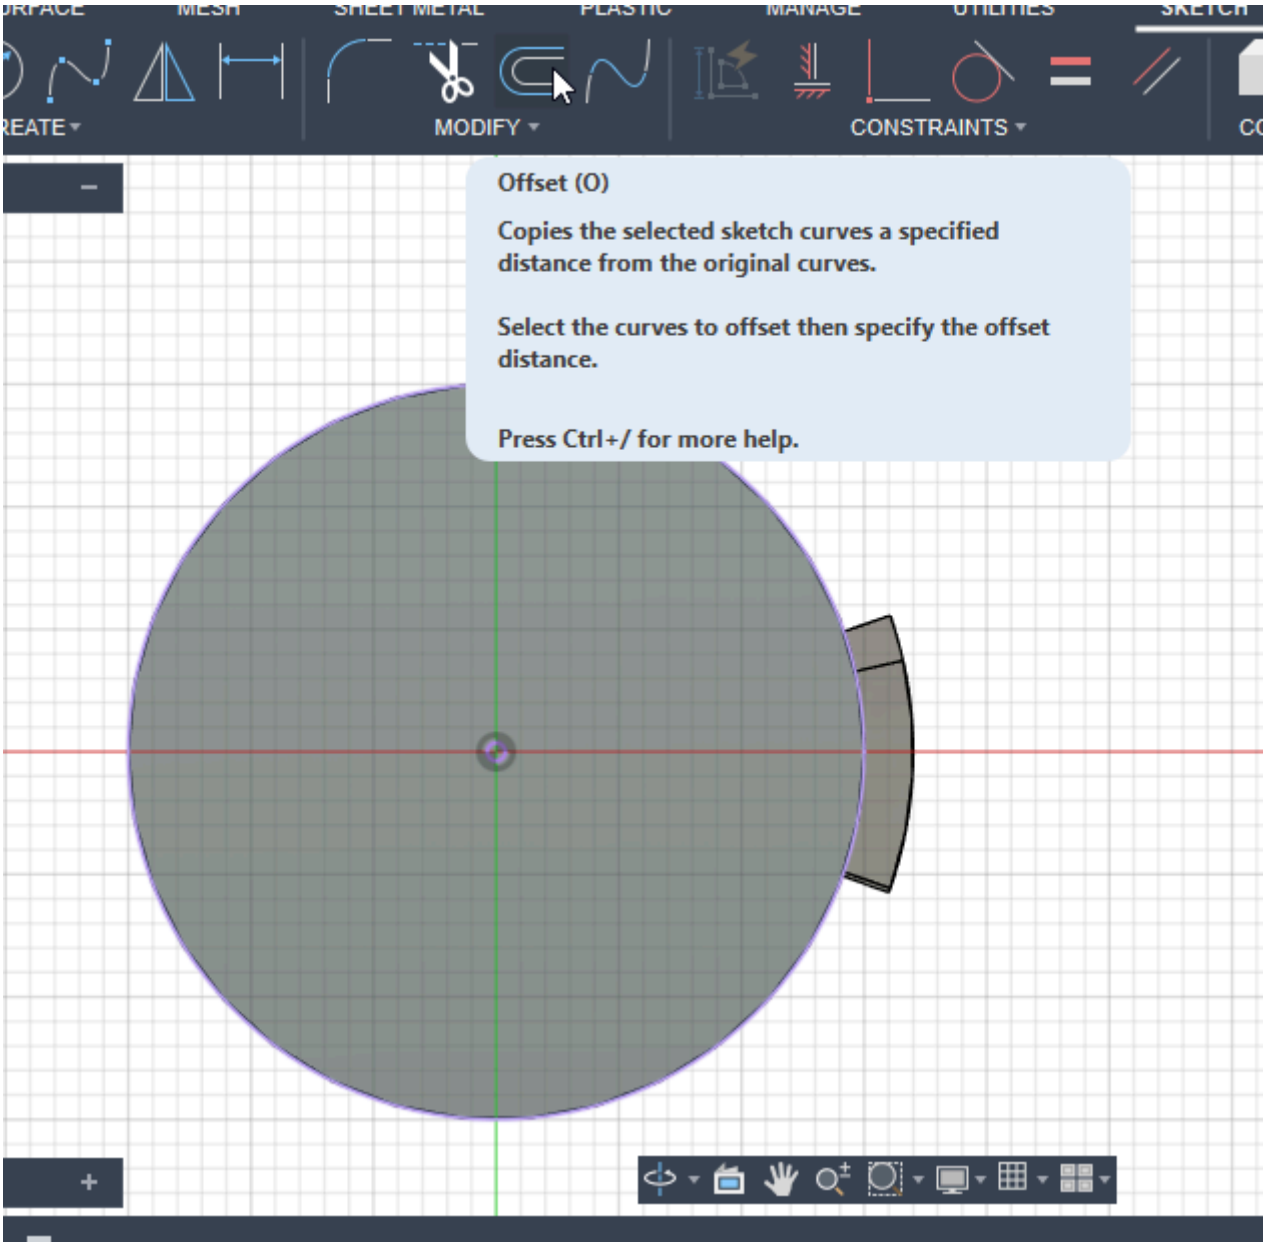

Emboss applied — adjust settings as needed

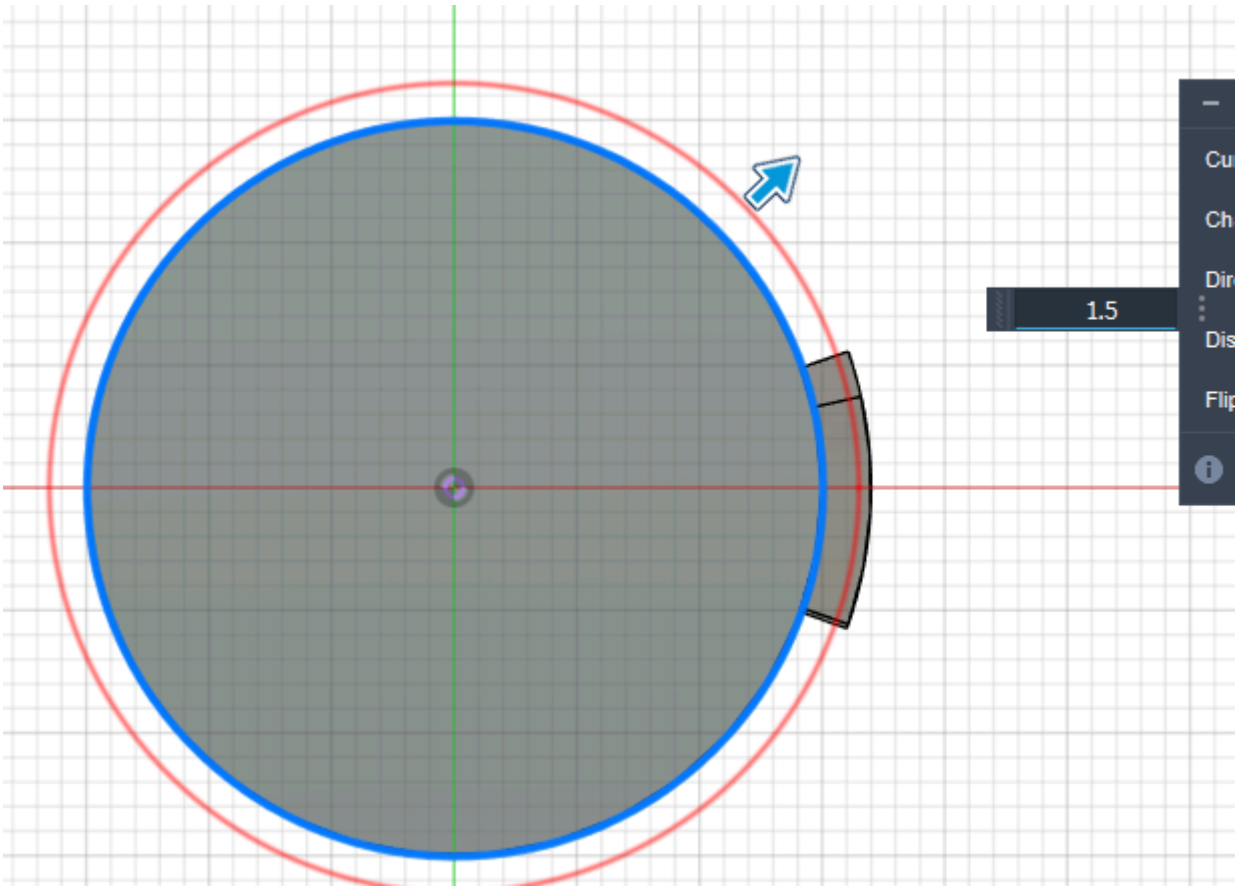

Move to left face → sketch → use Project to select the edge

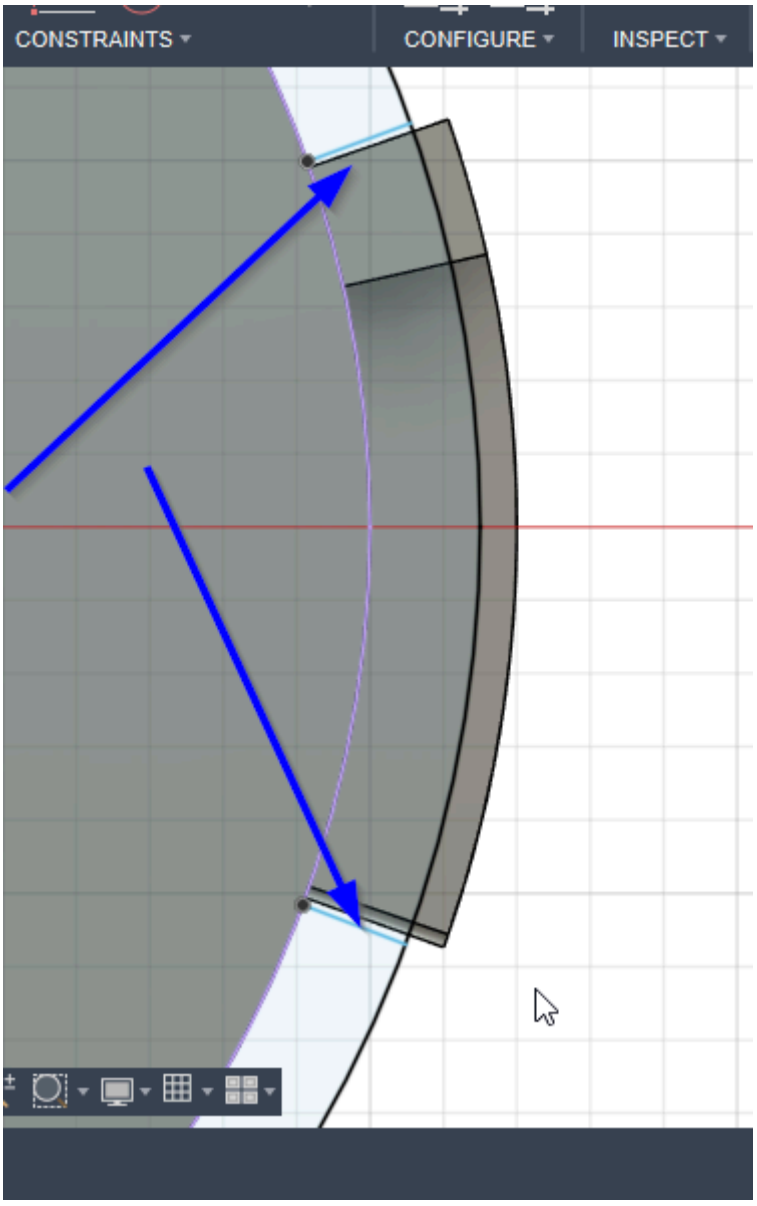

Projection result should look like this

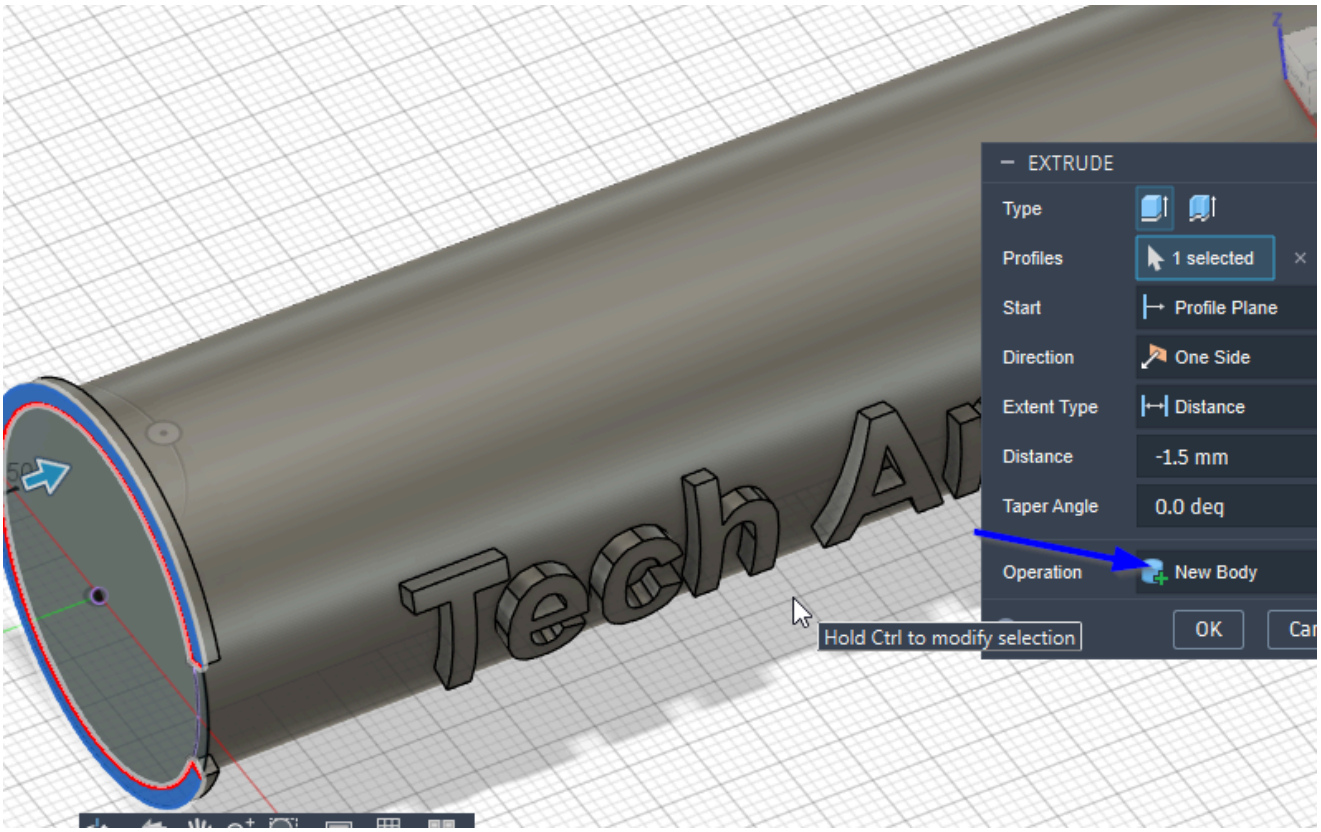

Now create an Offset

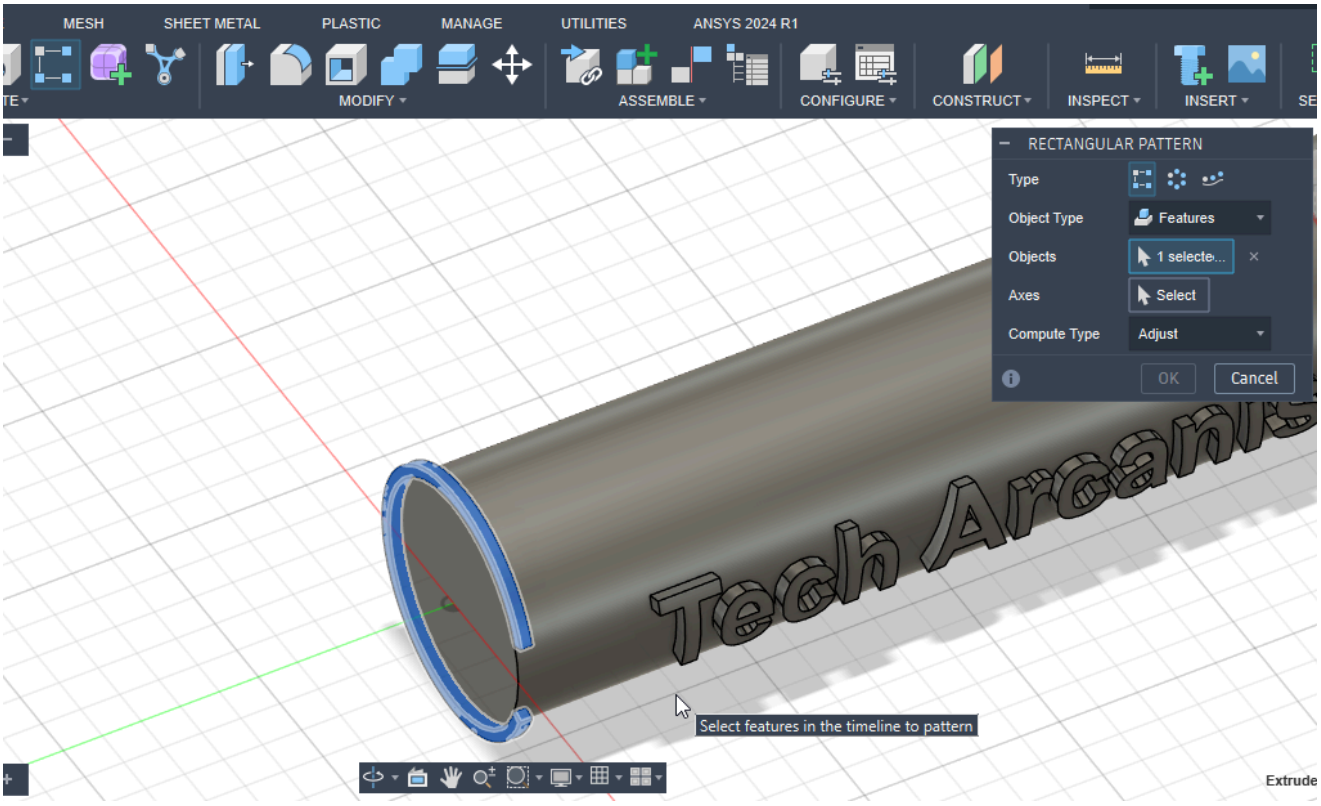

Offset the circle by 1.5mm

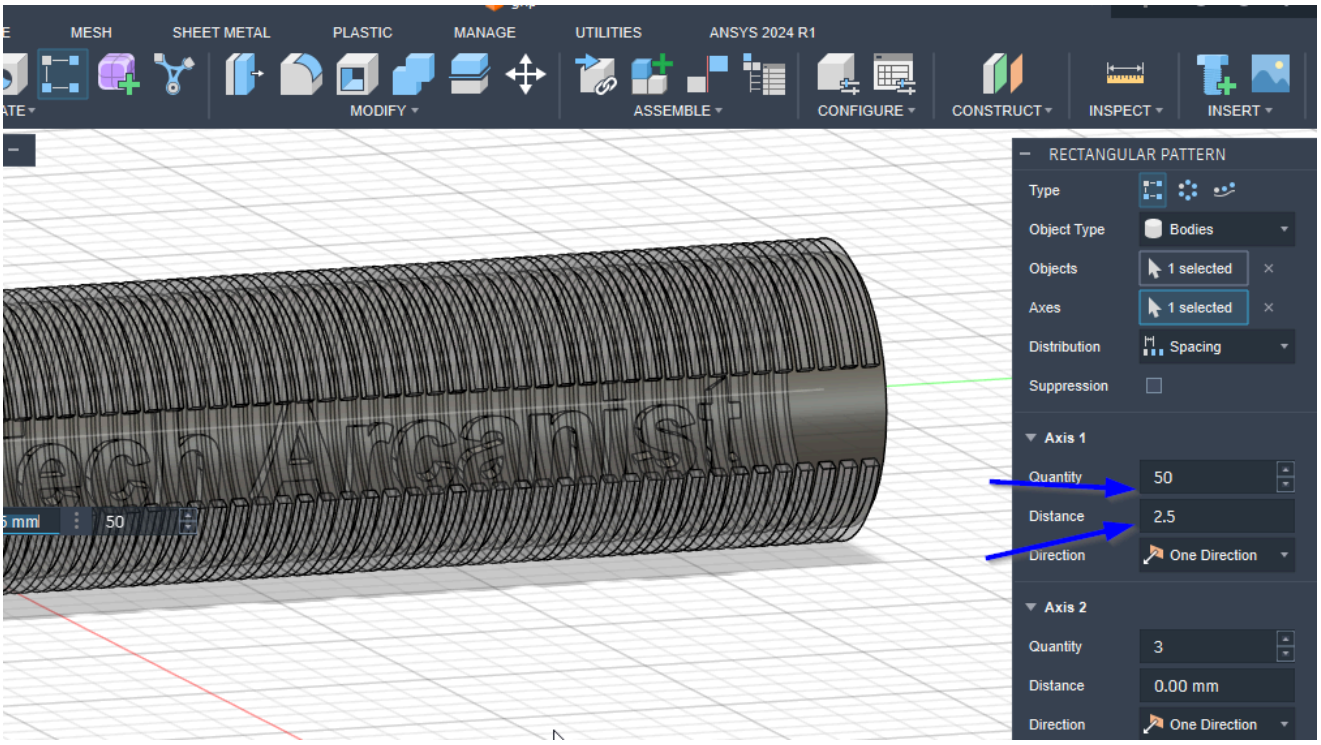

Draw two lines to define the rib section

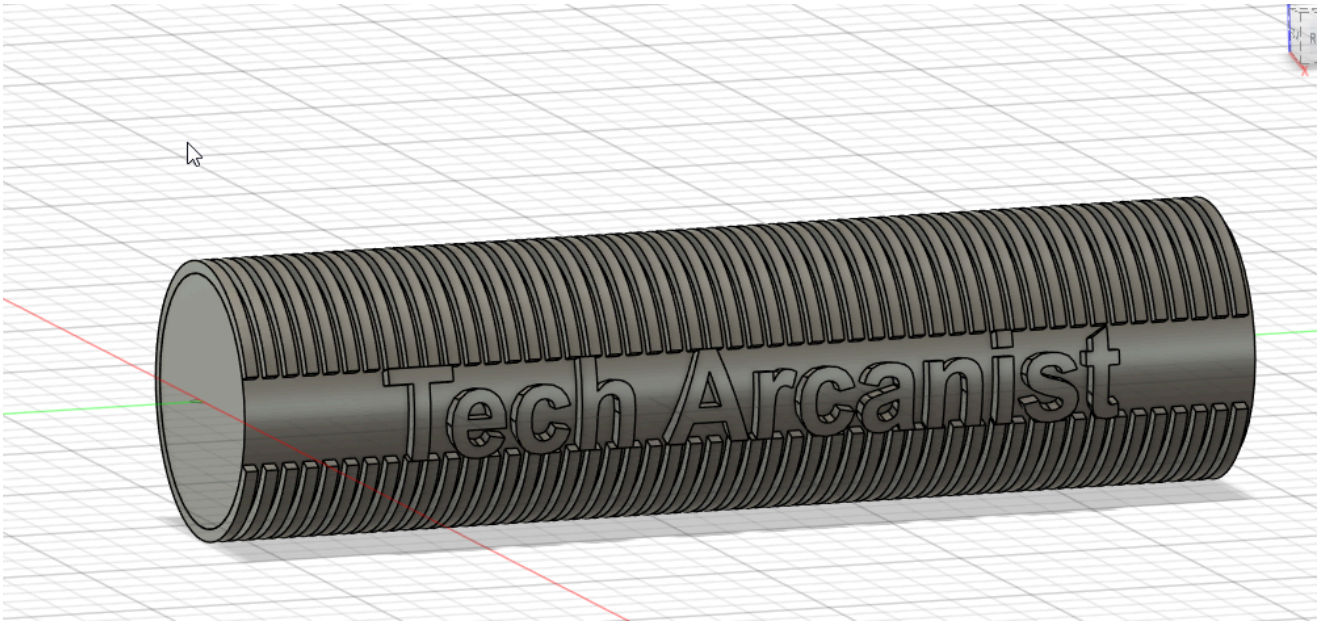

Extrude as New Body

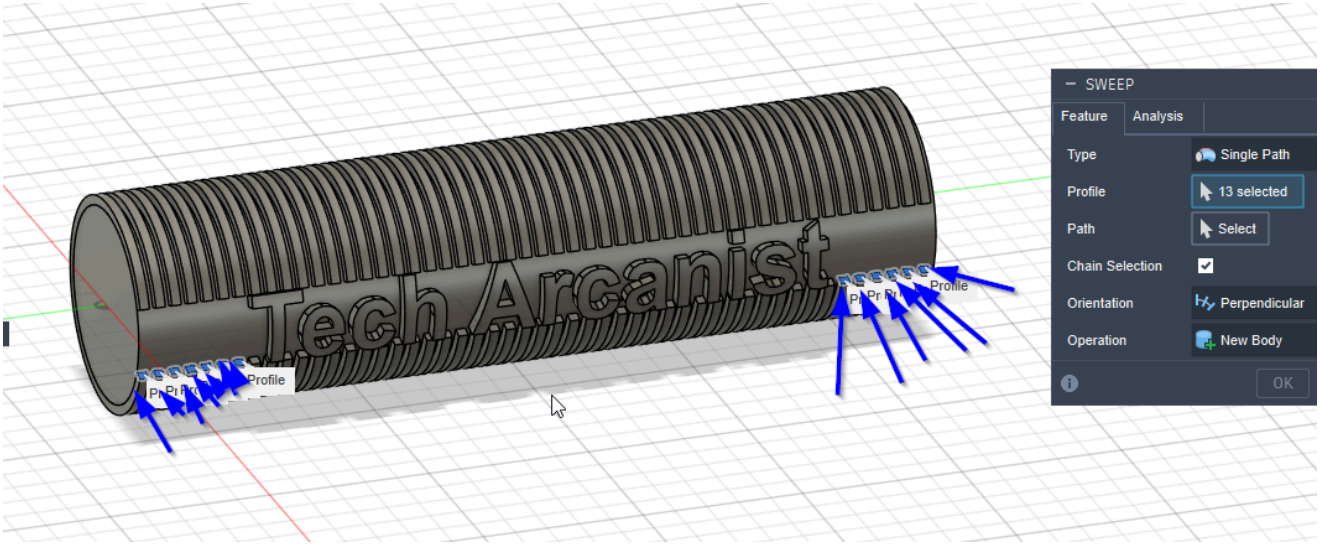

Select this part for patterning

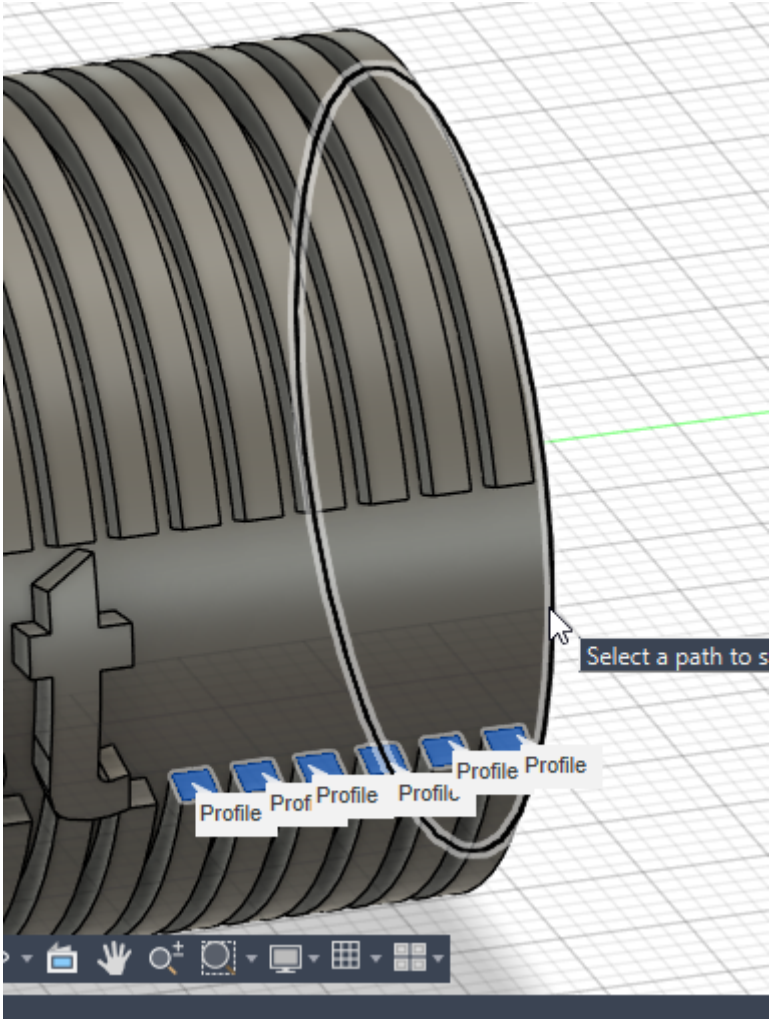

Rectangular Pattern setup

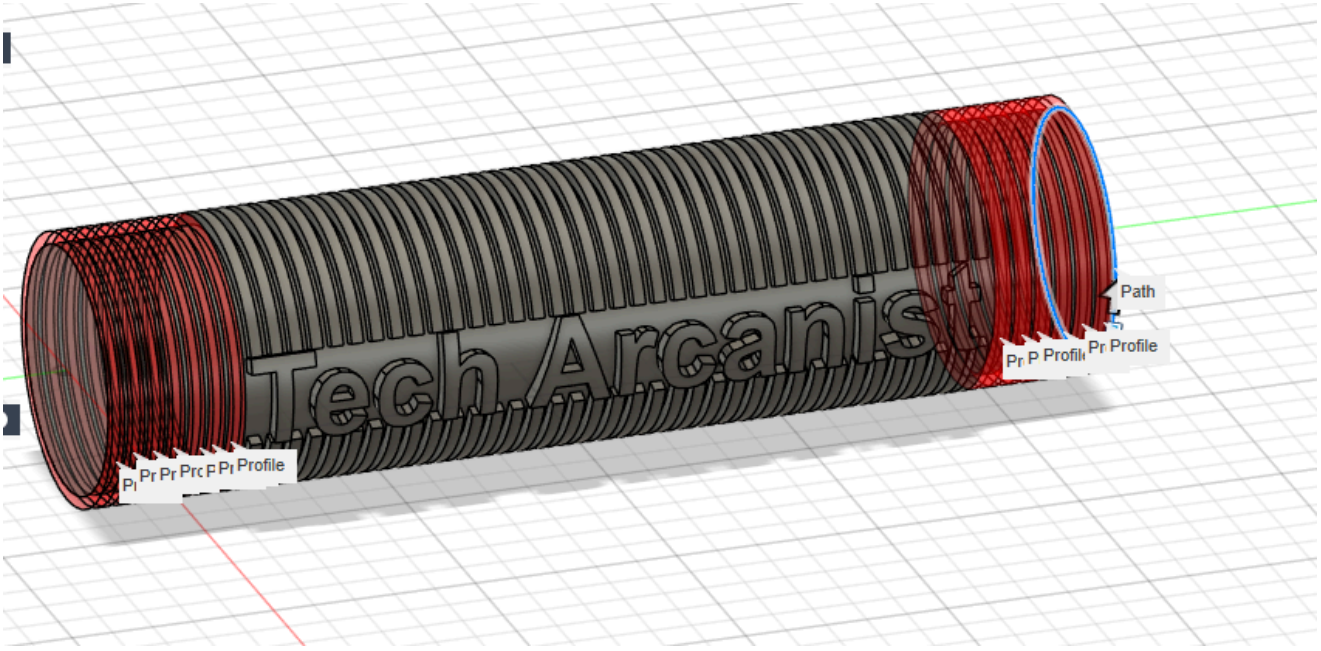

We will use Sweep for the remaining empty spaces

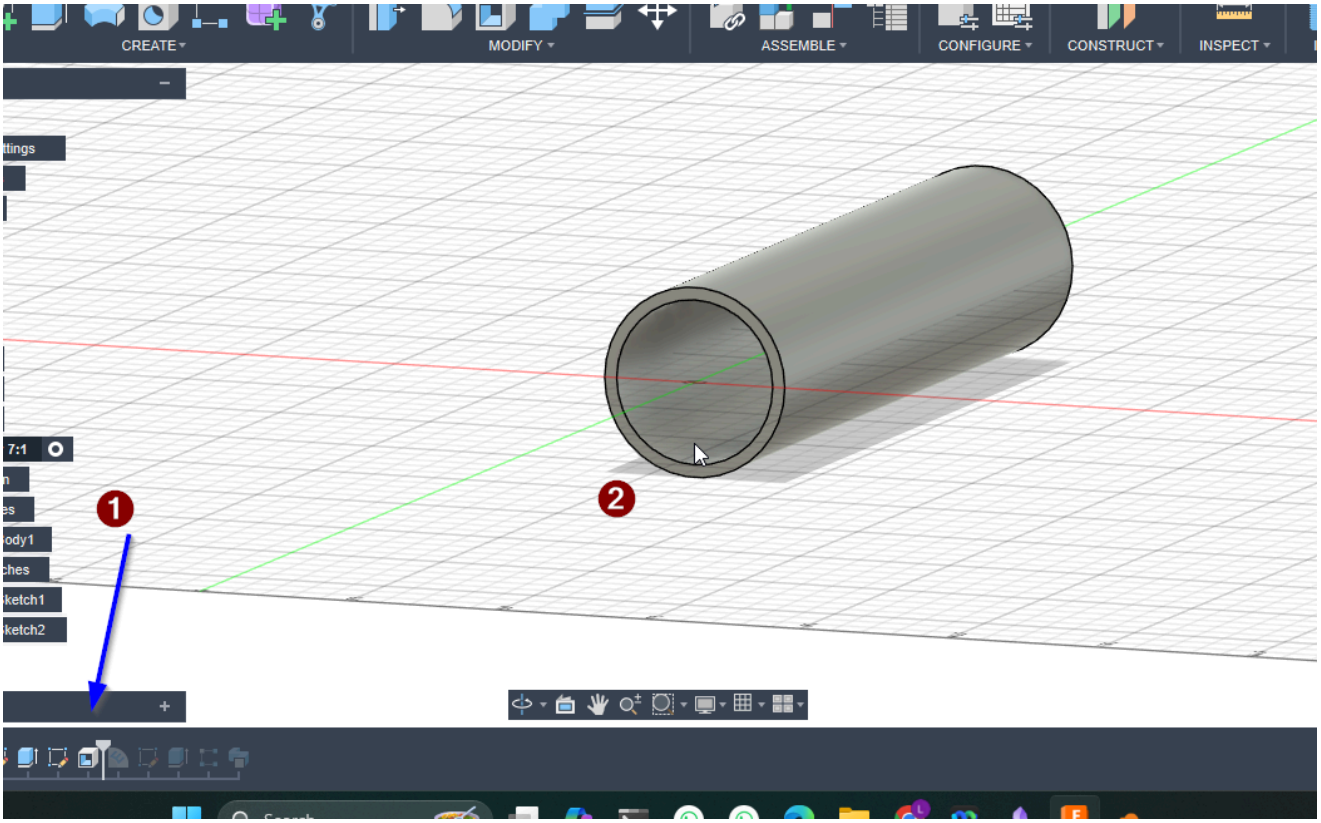

Sweep setup preview

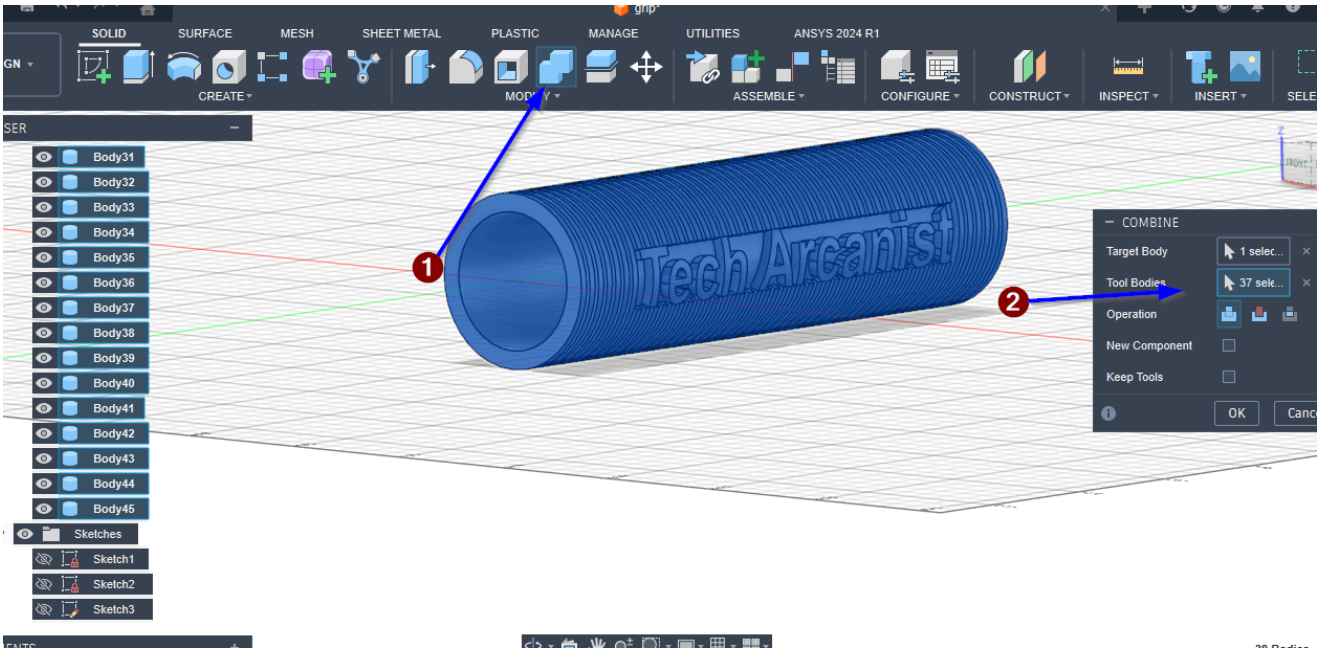

Select the profile for Sweep

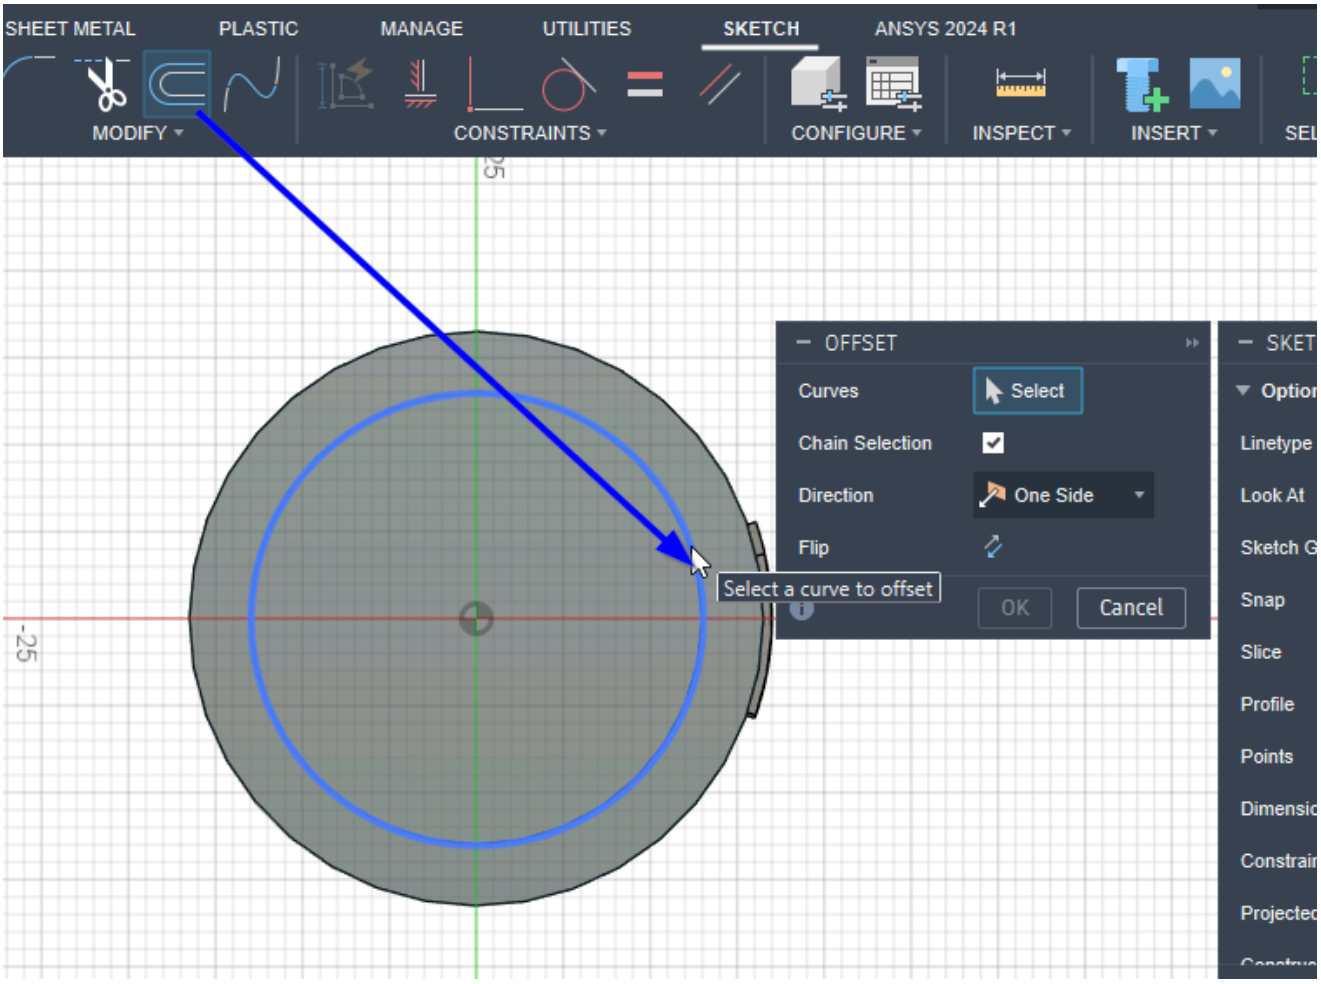

Then select this path and click OK

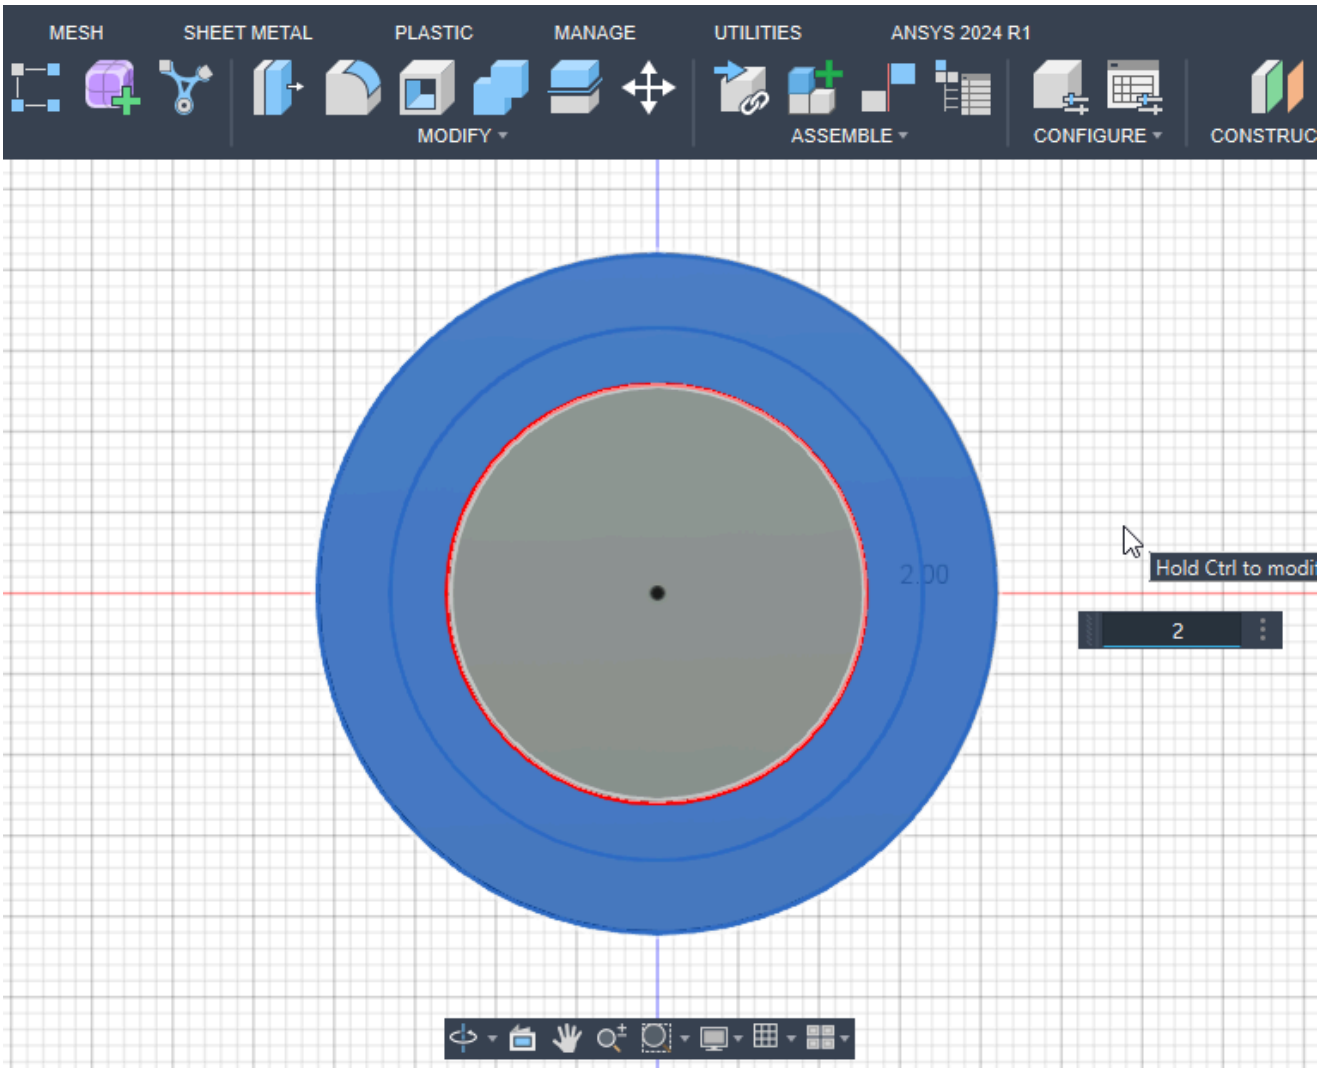

Go to timeline and apply a 2mm Shell

Combine all bodies

**Select the offset curve extend it according to handle

Extrude it to finish
