Napkin Holder (Sheet Metal)

CREATE NEW COMPONENT
SELECT **Sheet Metal**
SELECT SHEET RULE = **Steel (mm)**

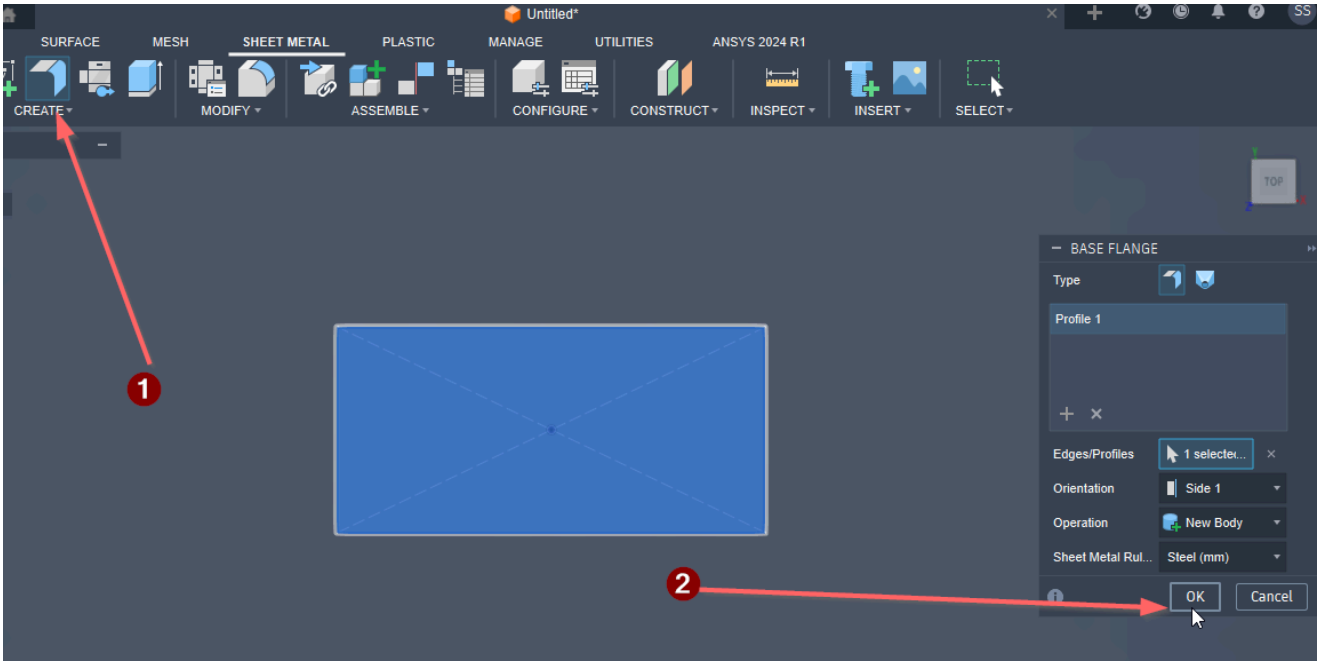

GO TO **Sheet Metal** → CREATE SKETCH on **XY plane**

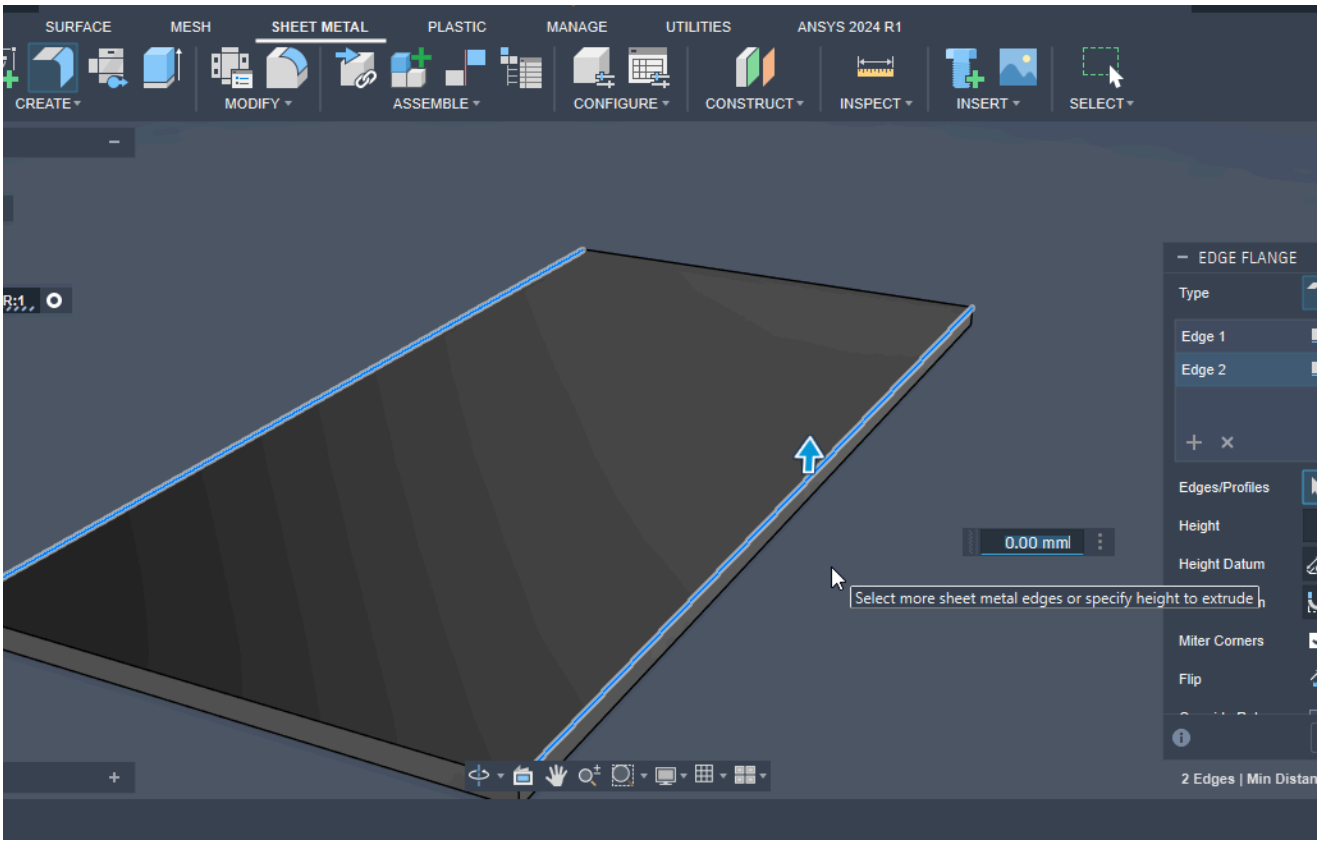

DRAW A RECTANGLE using **Center Rectangle**

Dimensions: **60 mm width × 125 mm length**

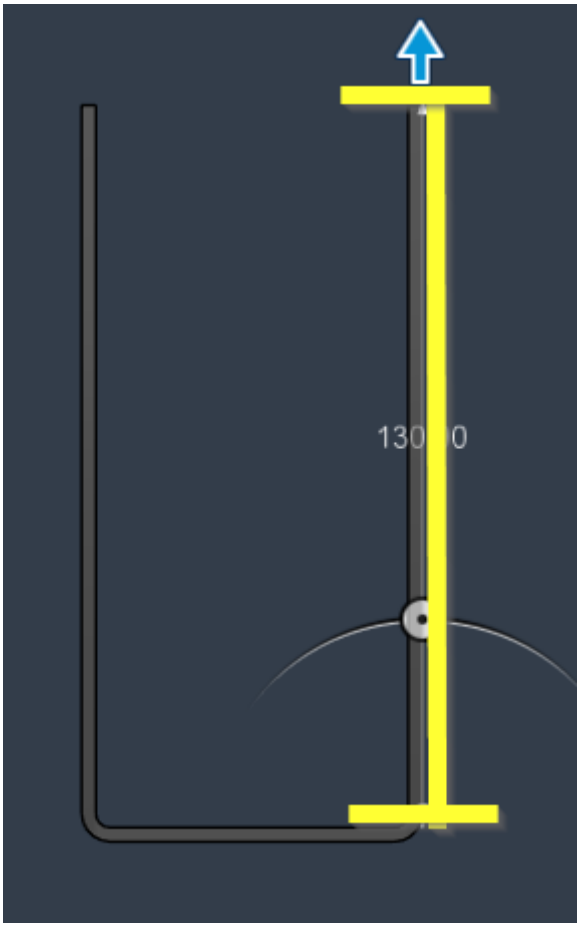

CLICK **Flange** → then OK

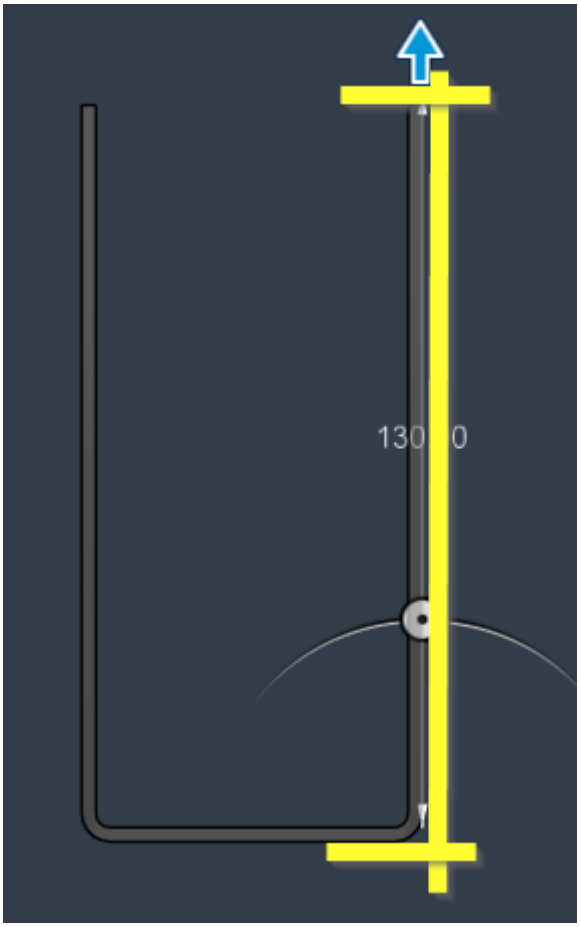

CLICK FLANGE again → select these two long edges

Understanding **Inner / Outer face**:

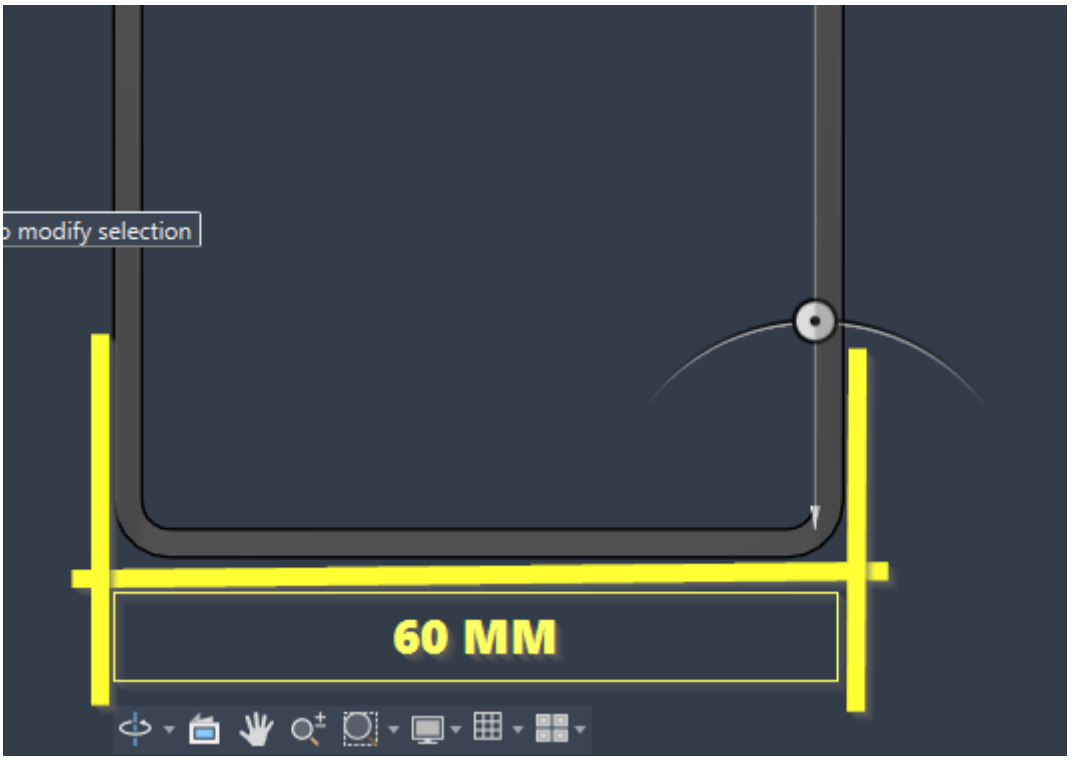

This shows **Inner Face**

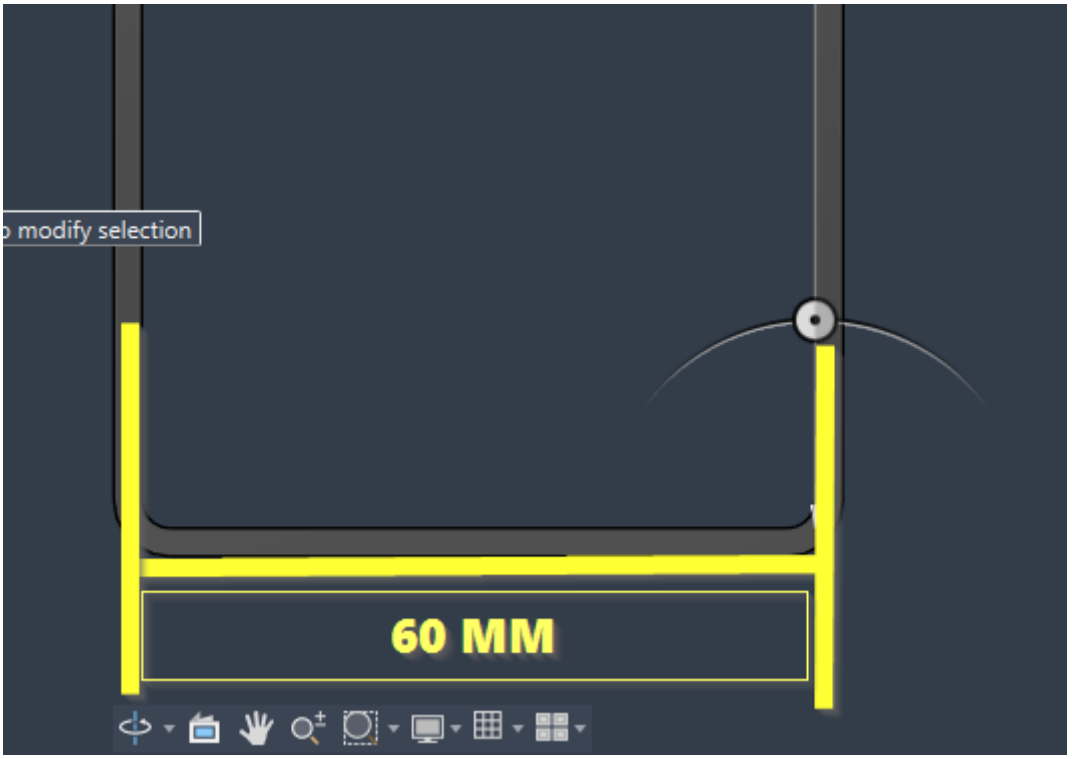

This shows **Outer Face**

Now Bend Position concept:

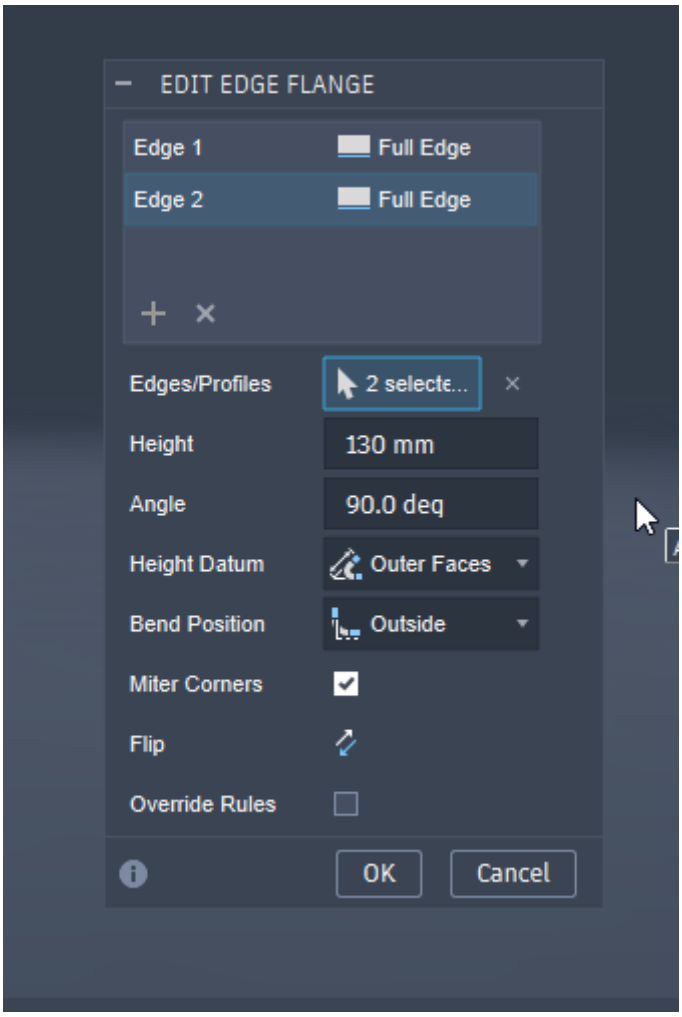

We took base width = **60 mm**

If **Inner** is chosen → inside width becomes 60 mm

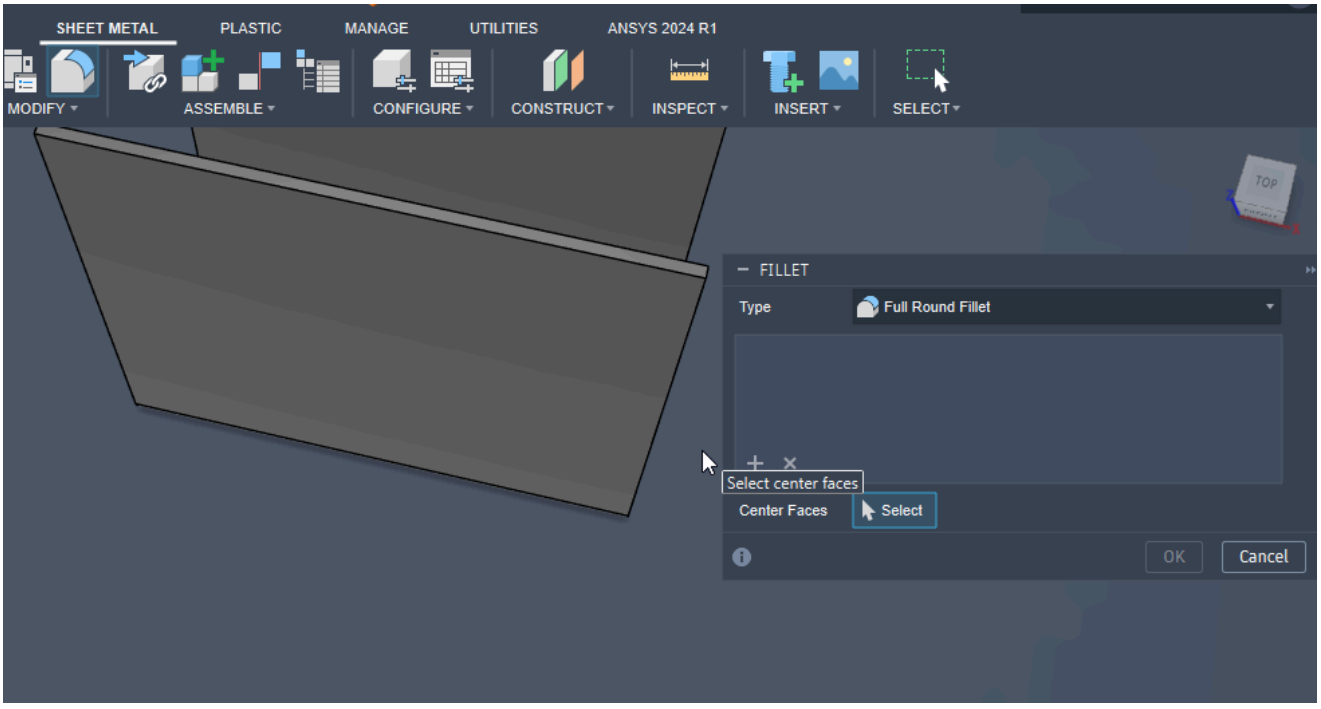

If **Outer** is chosen → outside width becomes 60 mm

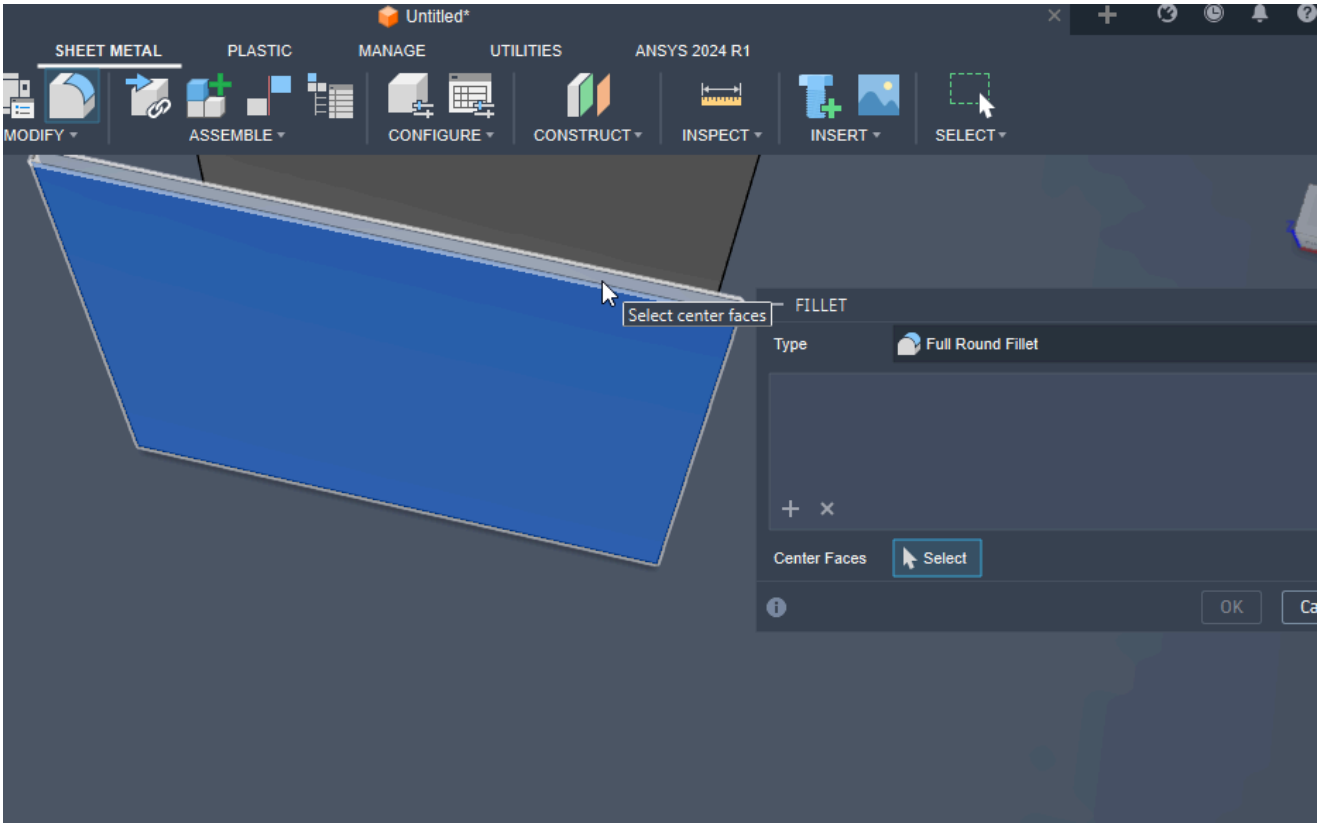

Final parameters for this flange:

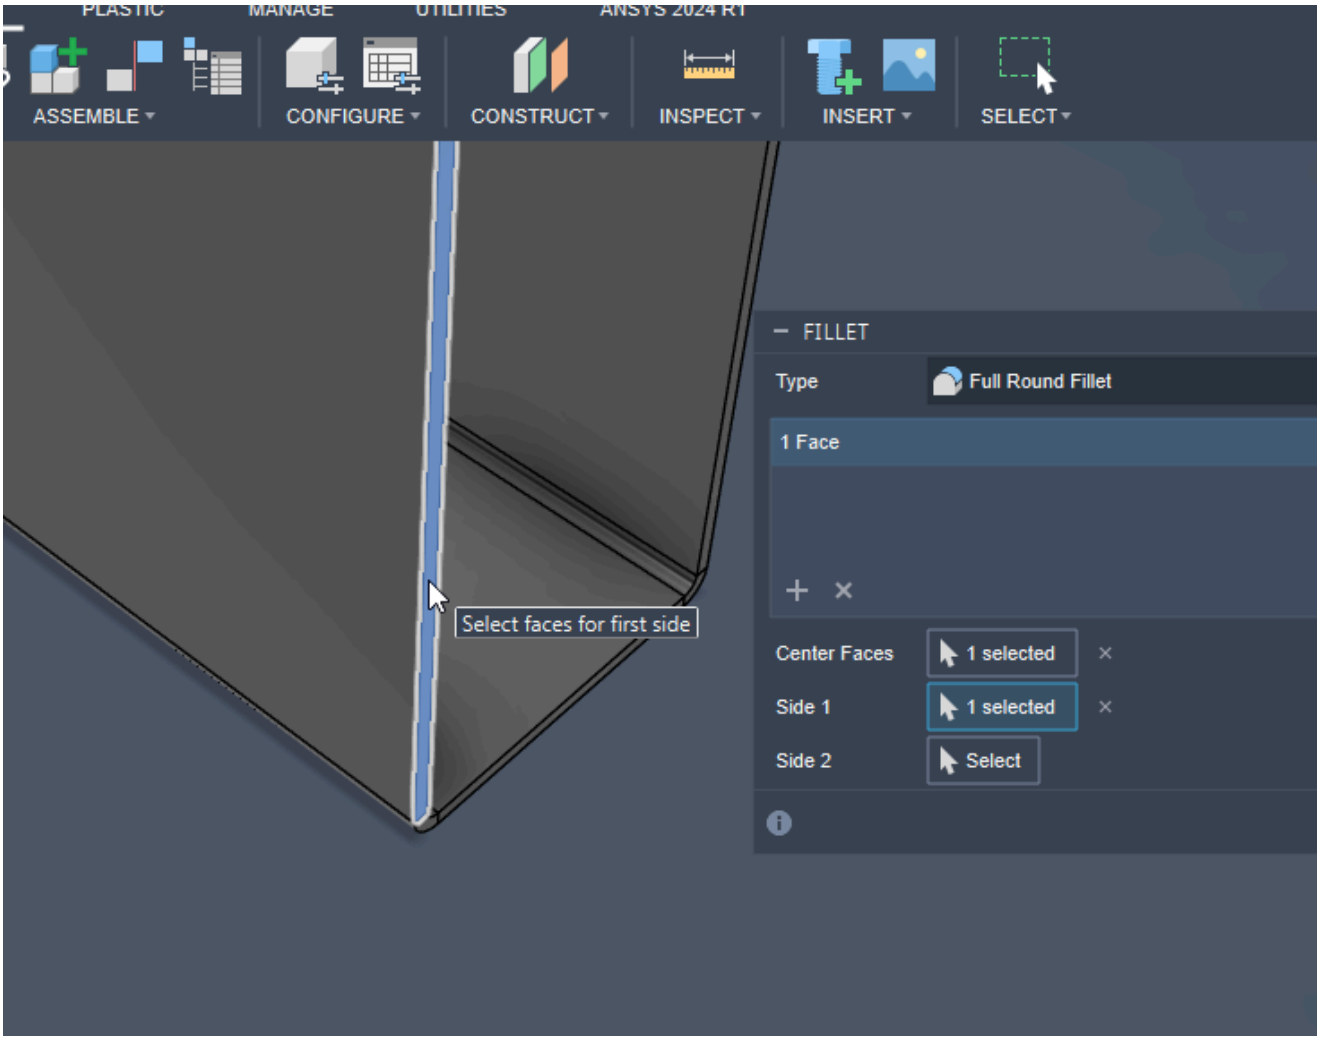

- Height Datum: **Outer**
- Bend Position: **Outside**

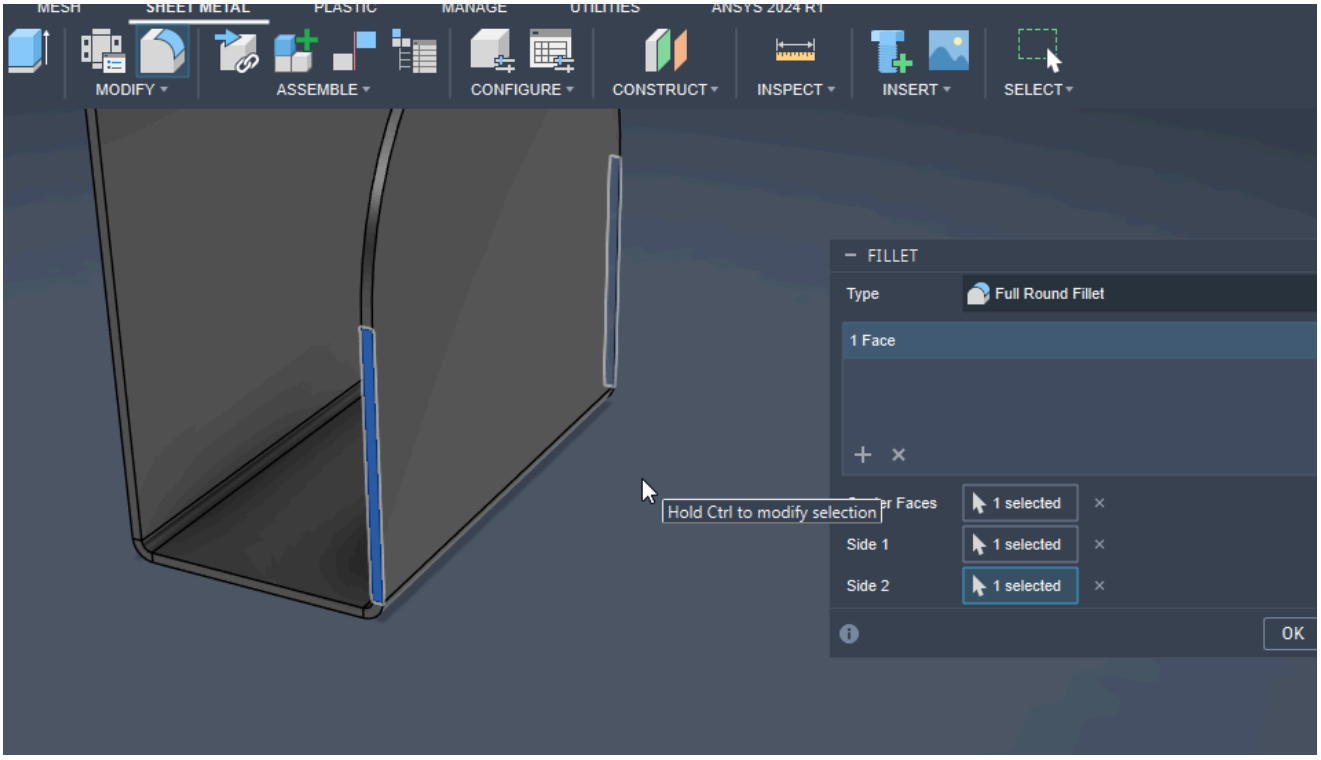

GO TO **Fillet** → choose **Full Round Fillet**

Select **center face**

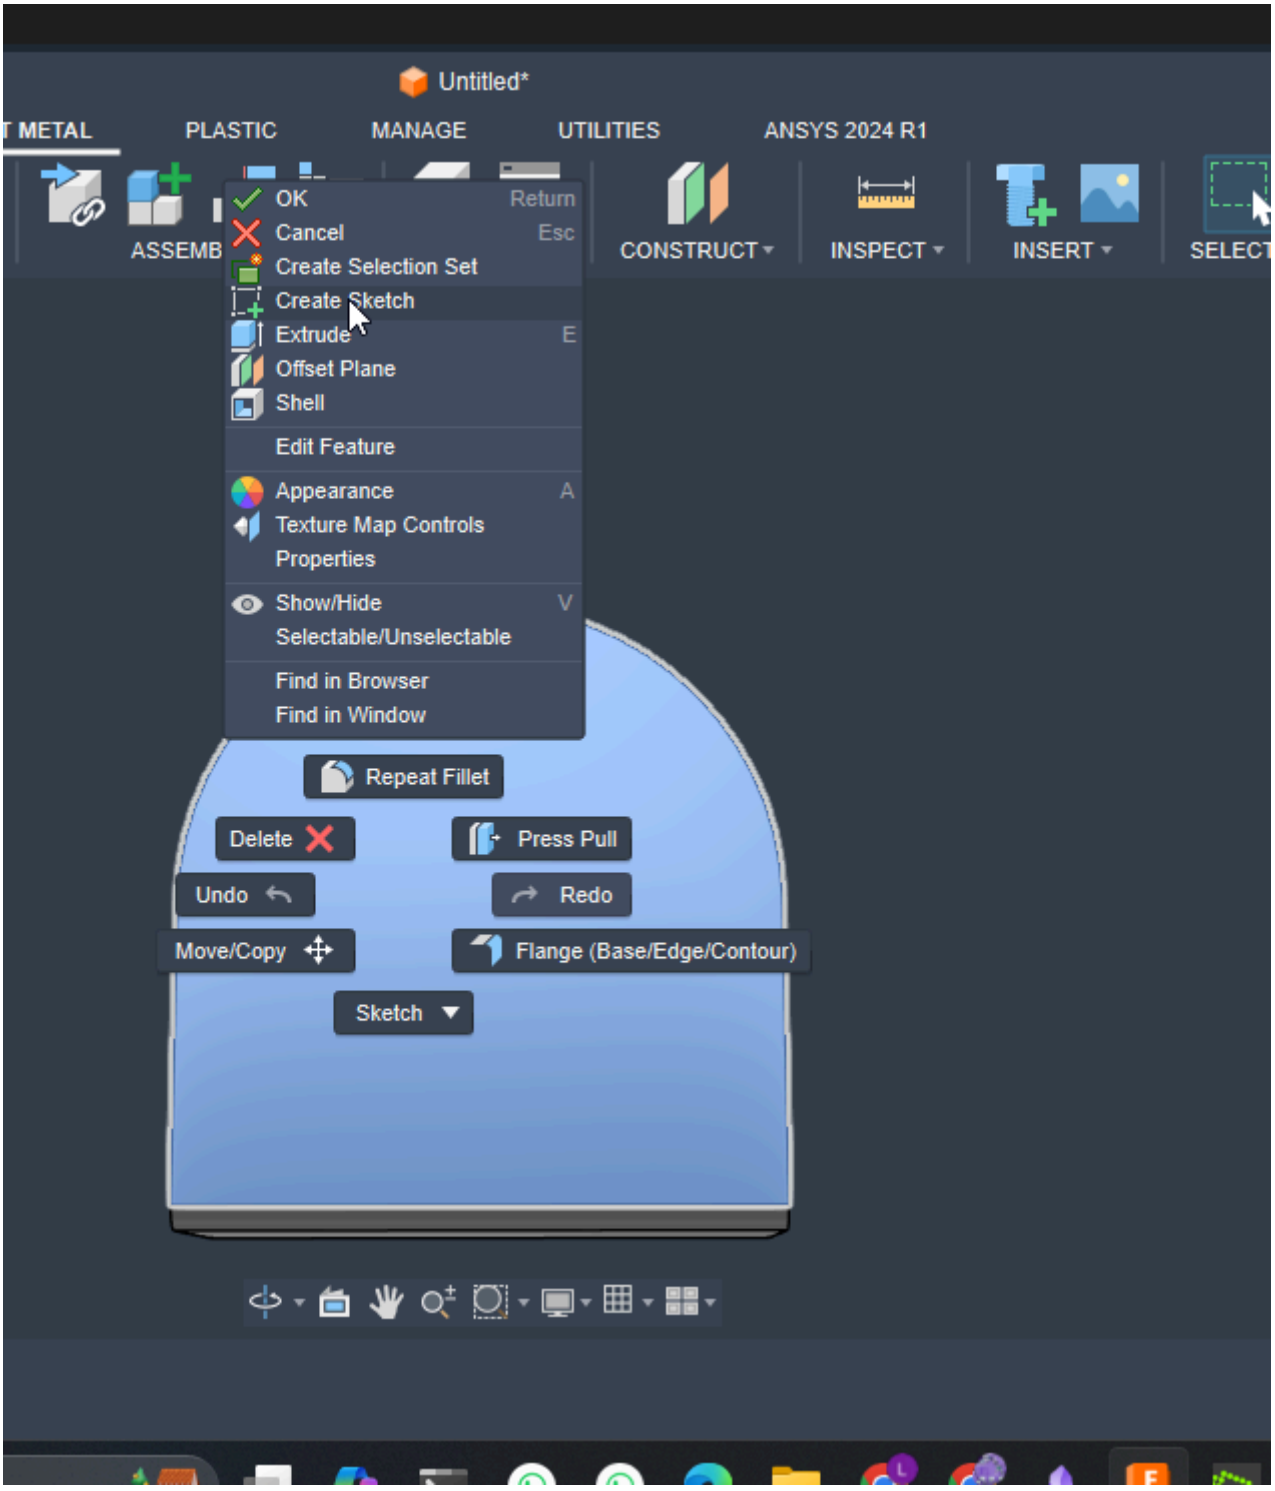

Hold CTRL → select **Side 1**

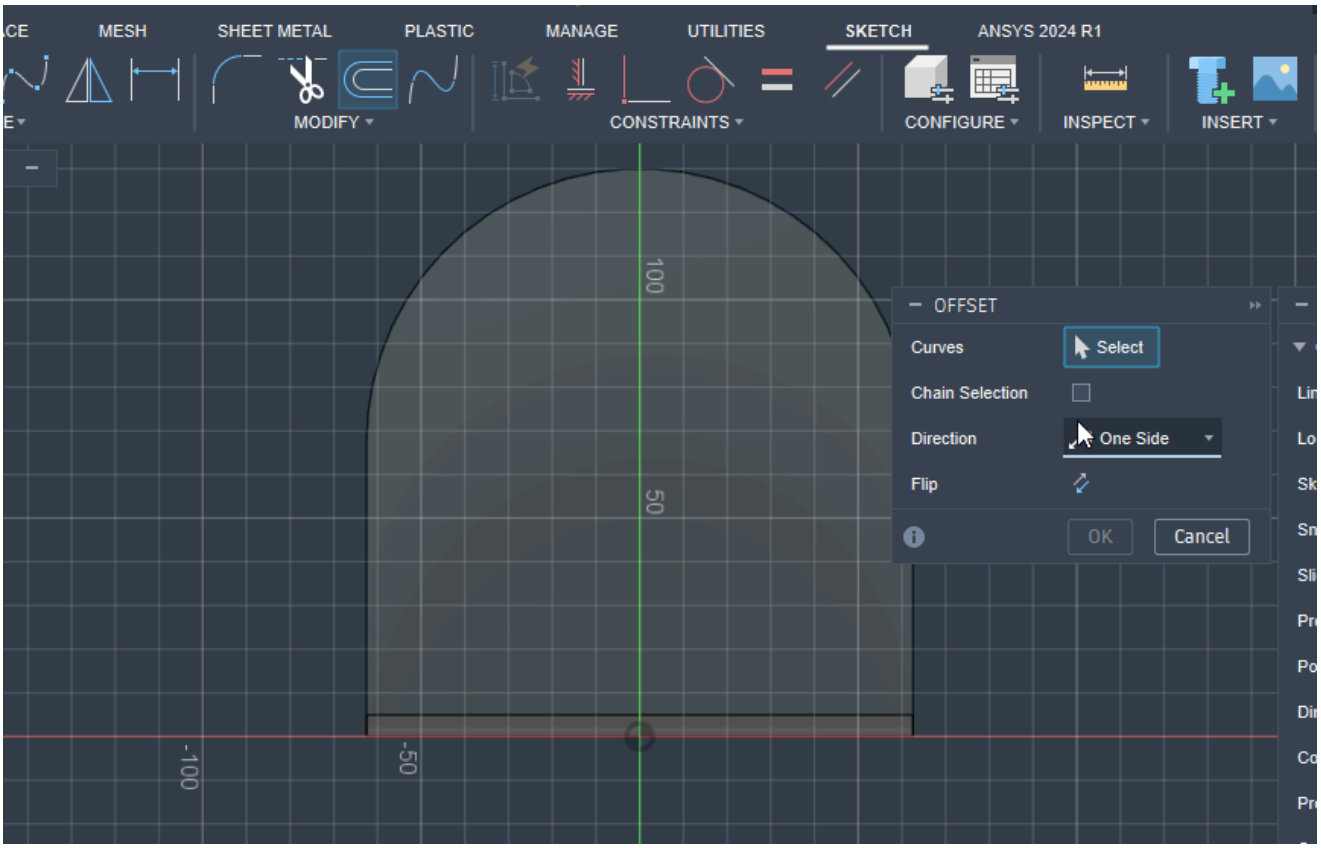

Select **Side 2**

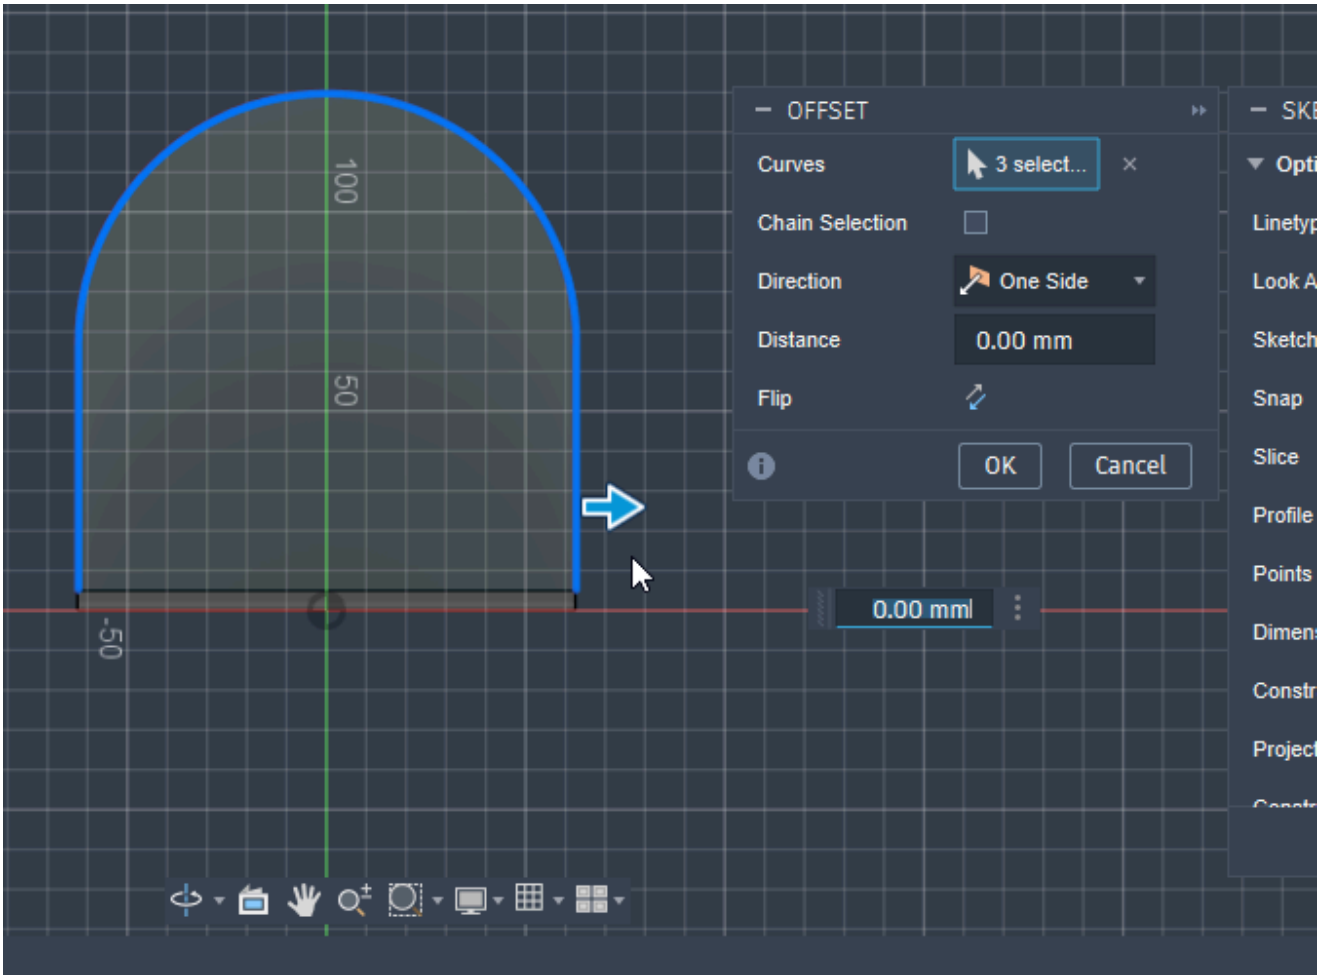

Repeat full-round fillet for the opposite flange.

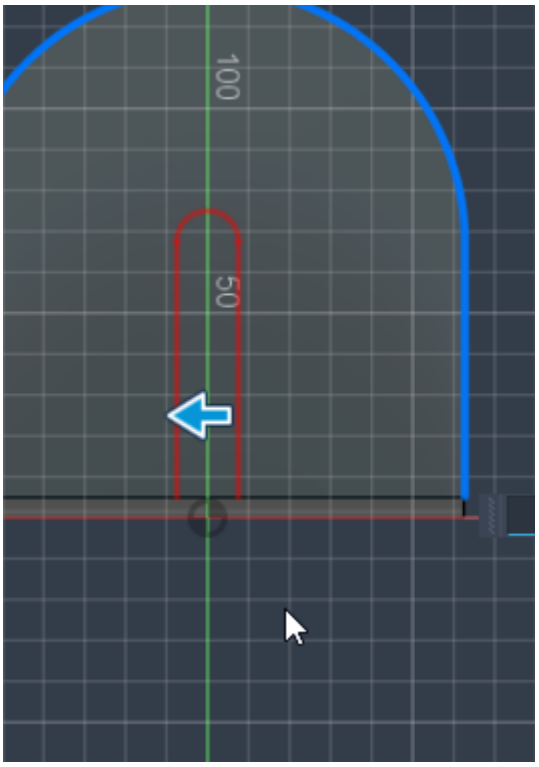

CREATE SKETCH on one side face

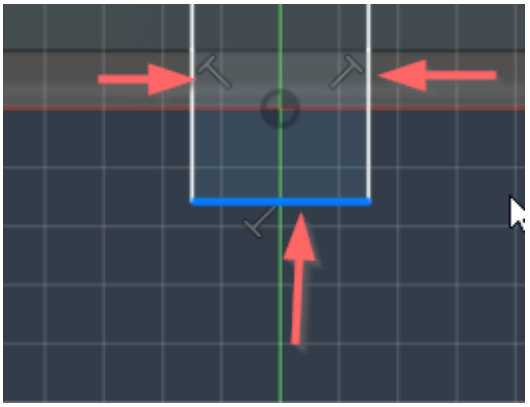

Use **Offset** (uncheck Chain Selection)

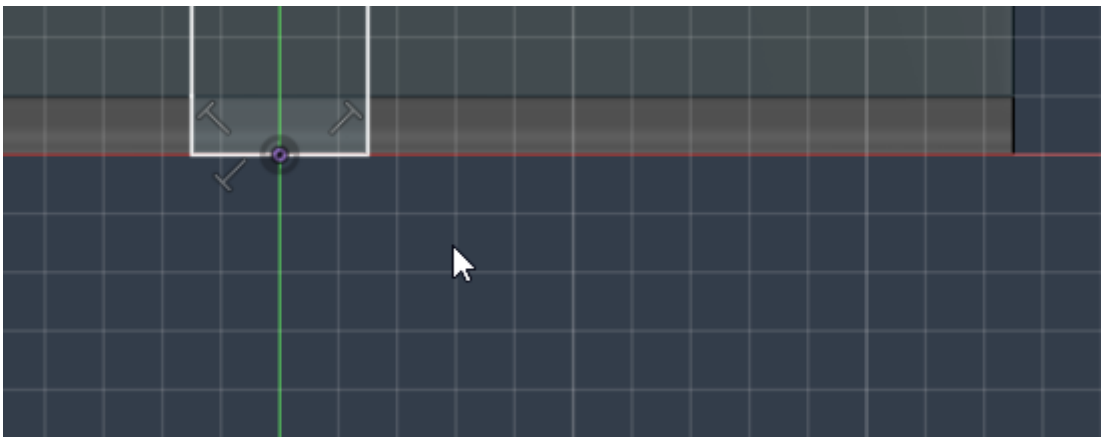

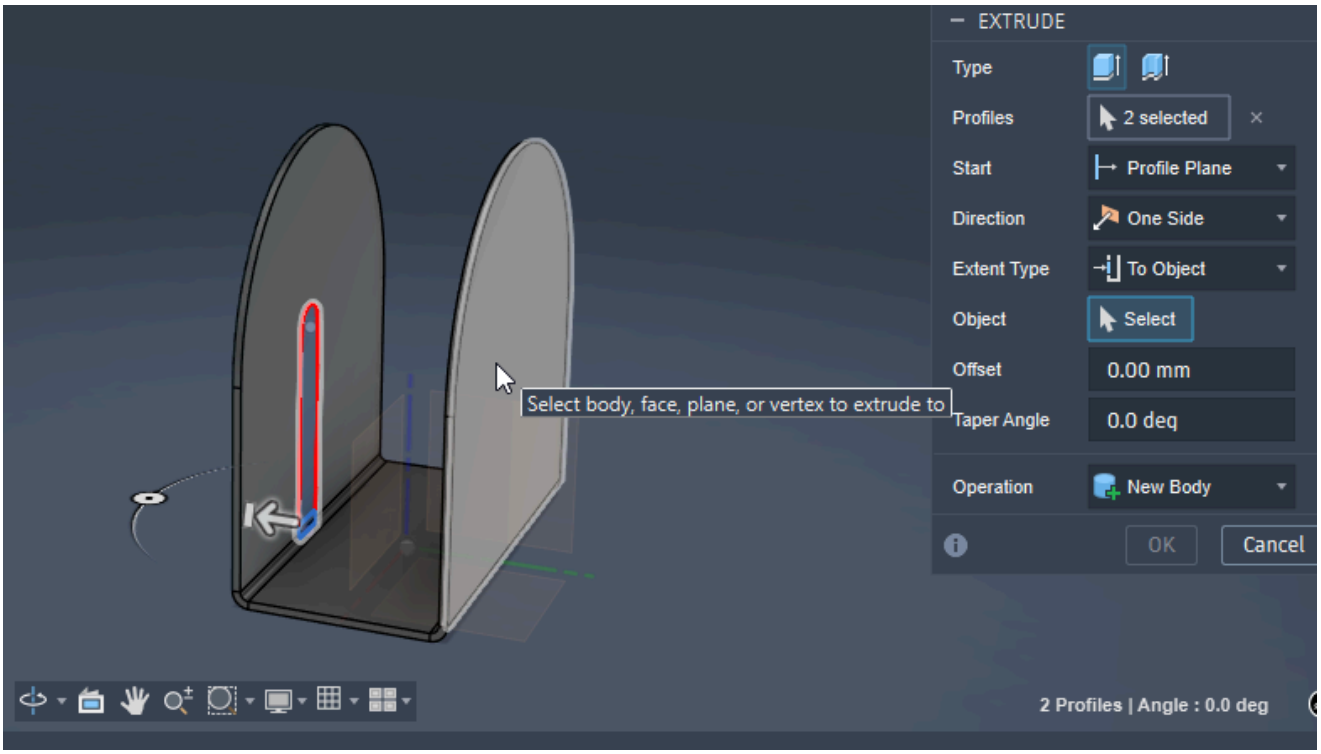

Select these edges

Set offset = **–55 mm**

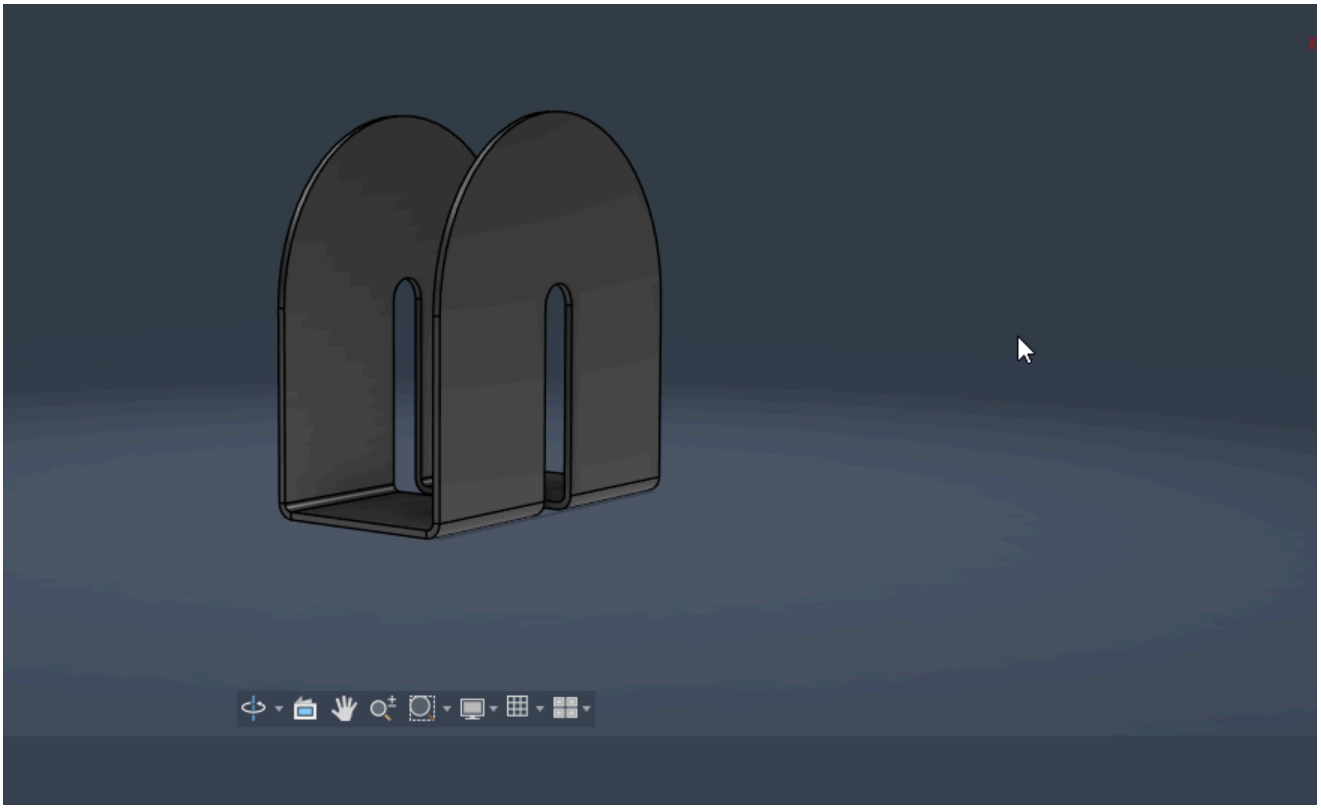

Use **Line Tool** to close the sketch, then apply **Coincident** (bottom line to Origin)

Just like this

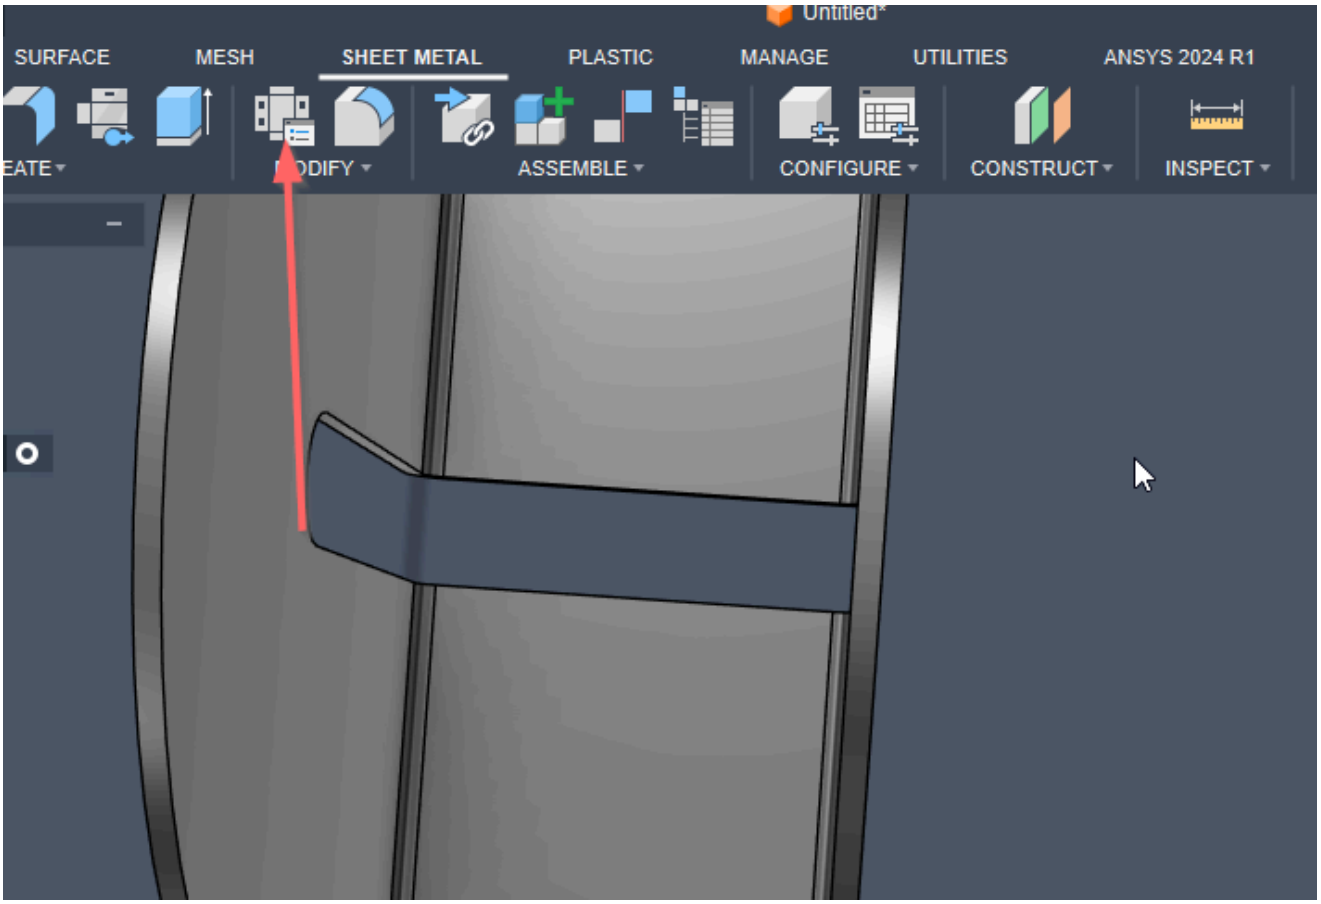

EXTRUDE the slot

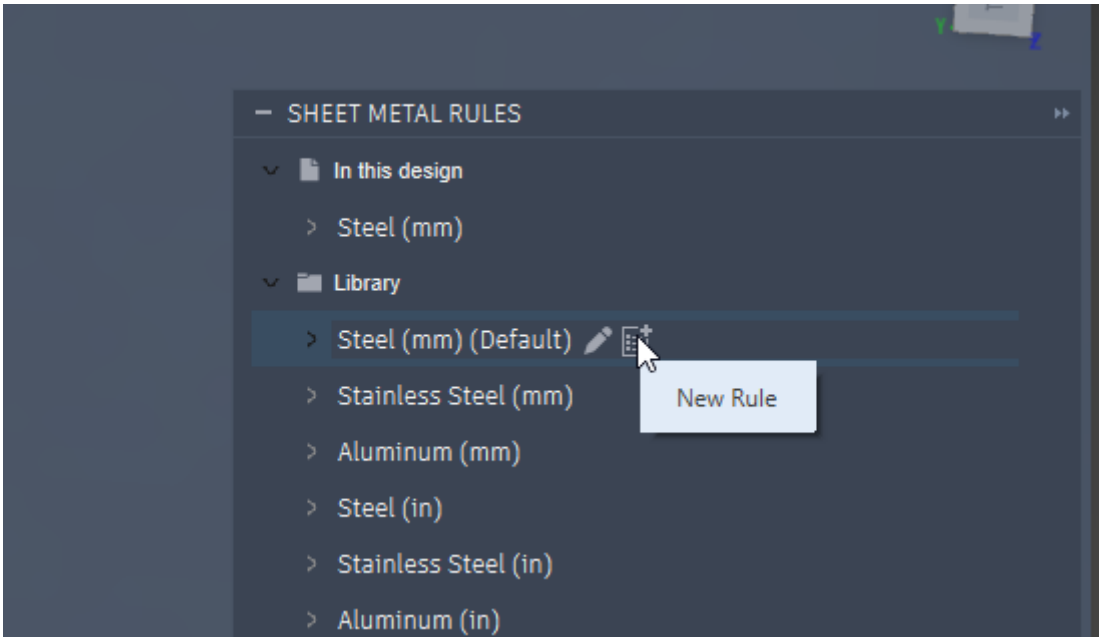

Extent Type = **To Object** → select opposite face

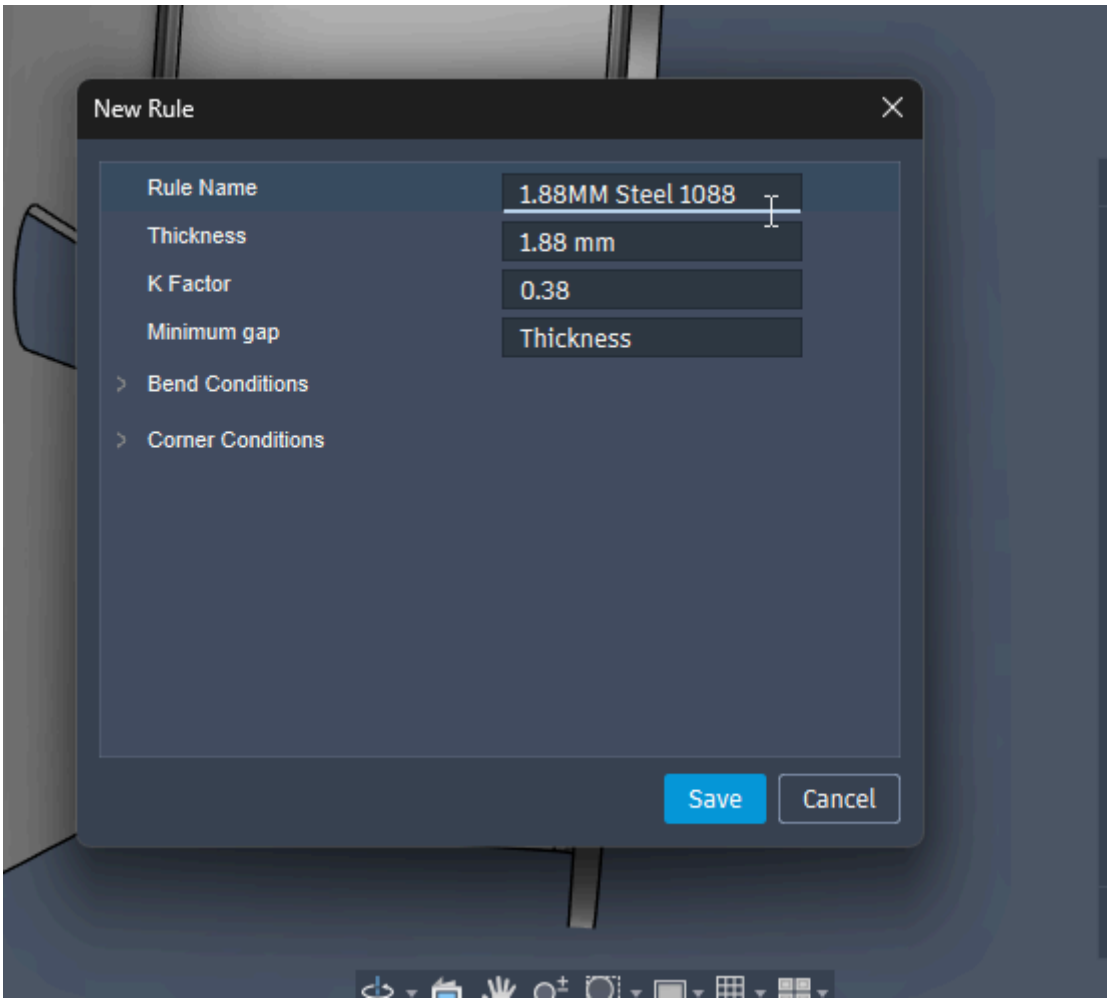

Result

ADD NEW SHEET METAL RULE

CLICK **New Rule**

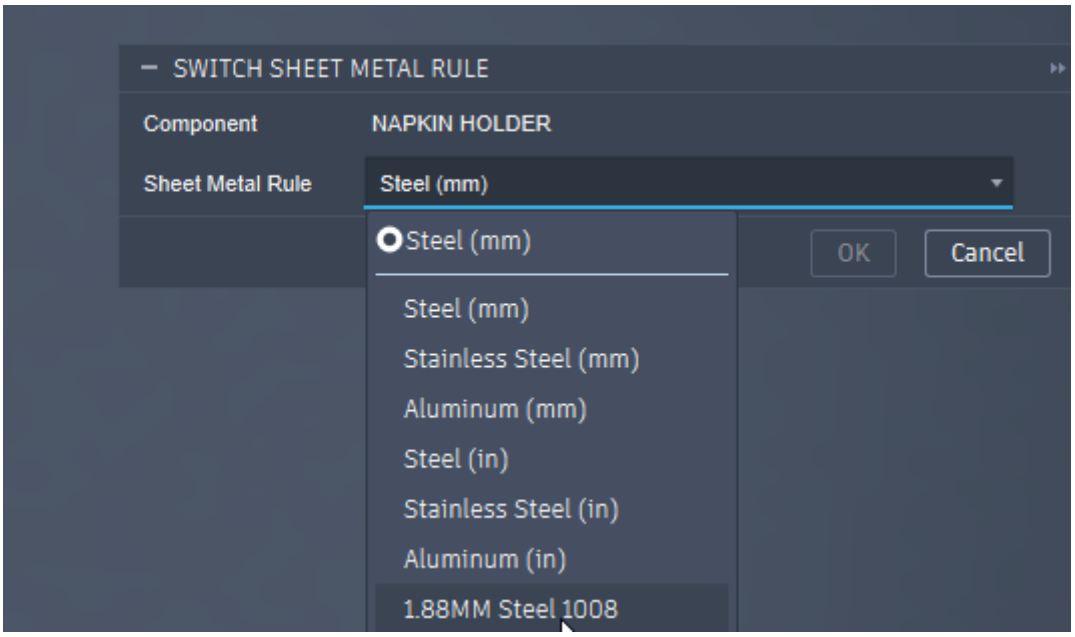

Set custom rule like this:

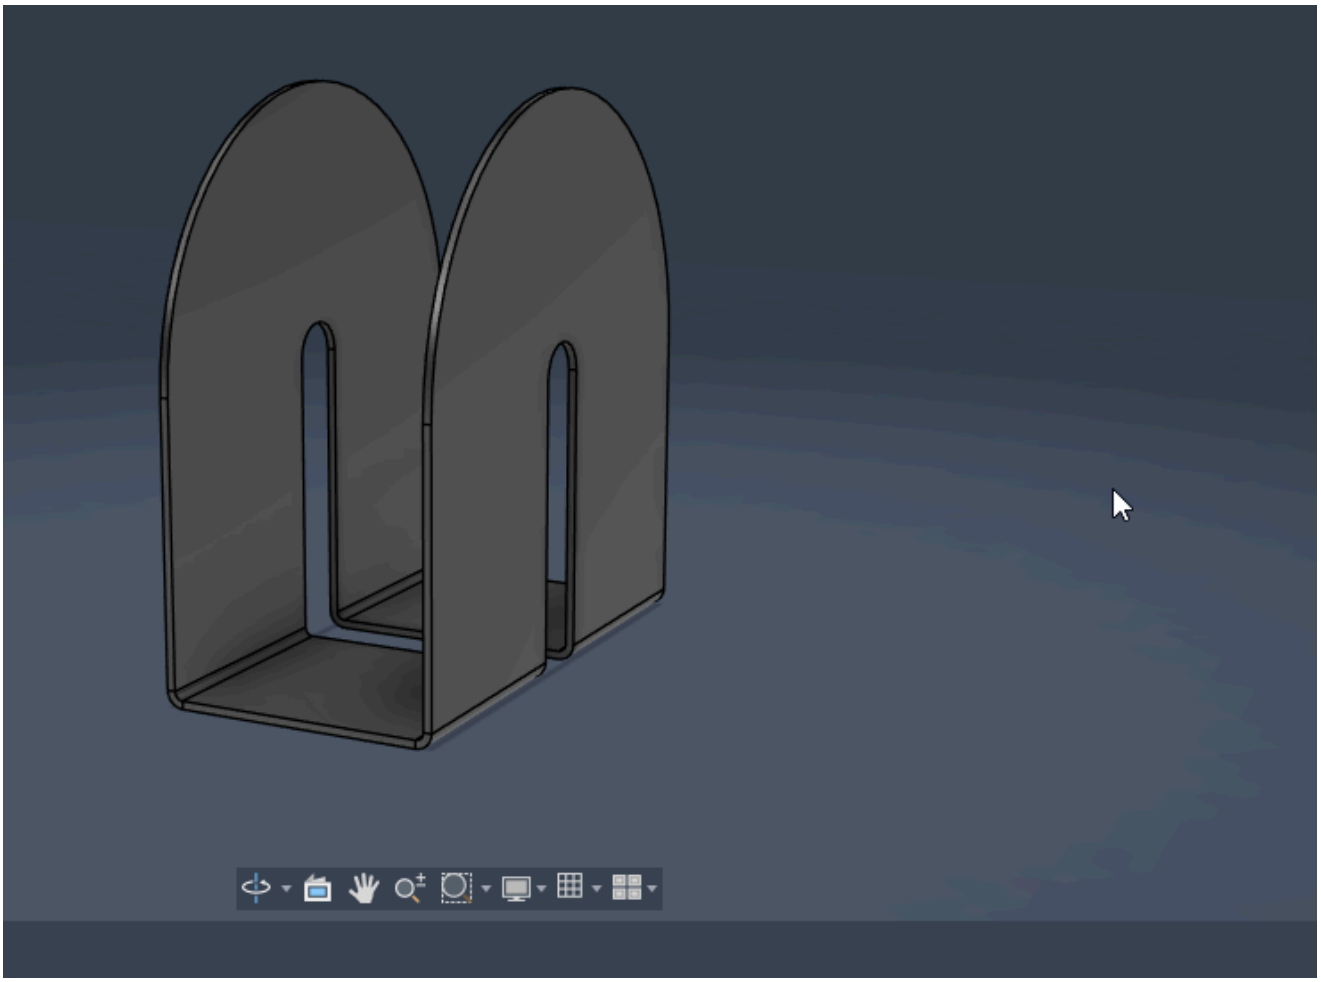

- Thickness: **1.88 mm**
- K-Factor: **0.38**
- Other settings as needed
  Click **Save**

GO TO **Switch Rule**

Choose your new rule

DONE — sheet becomes thin according to new rule
